Networking with Windows Server (Replaces M20741)

Cursusduur: 5 Dagen **Cursuscode: M55343** **Trainingsmethode: Virtual Learning**

Beschrijving:

This 5-day classroom-based course provides the fundamental networking skills required to deploy and support Windows Server in most organizations. It covers IP fundamentals, remote access technologies, and more advanced content including Software Defined Networking.

Although this course and the associated labs are written for Windows Server 2022, the skills taught will also be backwards compatible for Server 2016 and Server 2019.

The course and labs also focus on how to administer Windows Server using not only the traditional tools such as PowerShell and Server manager, but also Windows Admin Center.

Virtueel en Klassikaal™

Virtueel en Klassikaal™ is een eenvoudig leerconcept en biedt een flexibele oplossing voor het volgen van een klassikale training. Met Virtueel en Klassikaal™ kunt u zelf beslissen of u een klassikale training virtueel (vanuit huis of kantoor)of fysiek op locatie wilt volgen. De keuze is aan u! Cursisten die virtueel deelnemen aan de training ontvangen voor aanvang van de training alle benodigde informatie om de training te kunnen volgen.

Doelgroep:

This course is intended for IT professionals who have some networking knowledge and experience and are looking for a single course that provides insight into core and advanced networking technologies in Windows Server. The audience typically includes:
Network administrators who are looking to reinforce existing skills and learn about new networking technology changes and functionality in Windows Server.
System or Infrastructure Administrators with general networking knowledge who are looking to gain core and advanced networking knowledge and skills on Windows Server.

Doelstelling:

- **After completing this course you should be able to:**
- Plan and implement an IPv4 network.
- Implement Dynamic Host Configuration Protocol (DHCP).
- Implement IPv6.
- Implement Domain Name System (DNS).
- Implement and manage IP address management (IPAM).
- Plan for remote access.
- Implement DirectAccess.
- Implement virtual private networks (VPNs).
- Implement networking for branch offices.
- Configure advanced networking features.
- Implement Software Defined Networking.

Vereiste kennis en vaardigheden:

Attendees should meet the following prerequisites:

- Experience working with Windows Server
- Knowledge of the Open Systems Interconnection (OSI) model
- Understanding of core networking infrastructure components and technologies such as cabling, routers and switches
- Familiarity with networking topologies and architectures such as local area networks (LANs), wide area networks (WANs) and wireless networking
- Some basic knowledge of the TCP/IP protocol stack, addressing and name resolution

Examens en certificering

Recommended as preparation for the following exams:

- There is no exam currently aligned to this course

- Experience with and knowledge of virtualization
- Hands-on experience working with the Windows client operating systems such as Windows 10 or Windows 11
- M55341 - Installation, Storage, and Compute with Windows Server (Replaces M20740)

Cursusinhoud:

Module 1: Planning and implementing an IPv4 network

This module explains how to use fundamental networking tools and techniques to configure and troubleshoot IPv4-based networks.

Lessons M1

- Planning IPv4 addressing
- Configuring an IPv4 host
- Managing and troubleshooting IPv4 network connectivity

Lab 1: Planning an IPv4 network

- Migrating Settings by using Windows Easy Transfer
- Configuring a Reference Image of Windows 7
- Configuring a Reference Image

Lab 2: Planning an IPv4 network

- Migrating Settings by using Windows Easy Transfer
- Configuring a Reference Image of Windows 7
- Configuring a Reference Image

Lab 3: Implementing and troubleshooting an IPv4 network

- Verifying IPv4
- Troubleshooting IPv4

Lab 4: Implementing and troubleshooting an IPv4 network

- Verifying IPv4
- Troubleshooting IPv4After completing module 1, students will be able to:
- Plan IPv4 addressing.
- Configure an IPv4 host.
- Manage and troubleshoot IPv4 network connectivity

Module 2: Implementing DHCP

This module explains how to plan and implement DHCP to support the IPv4 infrastructure.

Lessons M2

- Overview of the DHCP server role
- Deploying DHCP
- Managing and troubleshooting DHCP

Lab 1: Planning and implementing name resolution by using DNS

- Planning DNS name resolution
- Implementing DNS servers and zones

Lab 2: Integrating DNS with Active Directory

- Integrating DNS with Active Directory

Lab 3: Configuring advanced DNS settings

- Configuring DNS policies
- Validating the DNS implementation
- Troubleshooting DNSAfter completing module 4, students will be able to:
- Implement DNS servers.
- Configure zones in DNS.
- Configure name resolution between DNS zones.
- Configure DNS integration with AD DS.
- Configure advanced DNS settings

Module 5: Implementing and managing IPAM

This module explains how to implement and manage the IPAM feature in Windows Server. This module also explains how to use IPAM to manage services such as DHCP and DNS.

Lessons M5

- Overview of IPAM
- Deploying IPAM
- Managing IP address spaces by using IPAM

Lab 1: Implementing IPAM

- Installing the IPAM Server feature
- Provisioning the IPAM Server
- Managing IP address spaces by using IPAM

Lab 2: Implementing IPAM

- Installing the IPAM Server feature
- Provisioning the IPAM Server
- Managing IP address spaces by using IPAMAfter completing module 5, students will be able to:
- Describe the IPAM functionality and components.
- Deploy IPAM.
- Manage IP address spaces by using IPAM.

Module 6: Remote access in Windows Server

This module explains how to plan for remote

This module explains how to implement and manage remote access in Windows Server by using VPNs.

Lessons M8

- Planning VPNs
- Implementing VPNs

Lab 1: Implementing VPN

- Implementing VPN
- Validating the VPN deployment
- Troubleshooting VPN accessAfter completing module 8, students will be able to:
- Plan a VPN solution.
- Implement VPNs.

Module 9: Implementing networking for branch offices

This module explains how to implement network services for branch offices.

Lessons M9

- Networking features and considerations for branch offices
- Implementing Distributed File System (DFS) for branch offices
- Implementing BranchCache for branch offices

Lab 1: Implementing DFS for branch offices

- Implementing DFS
- Validating the deployment

Lab 2: Implementing BranchCache

- Implementing BranchCache
- Validating the deployment

After completing module 9, students will be able to:

- Describe the networking features and considerations for branch offices.
- Implement DFS for branch offices.
- Implement BranchCache for branch offices.

Module 10: Configuring advanced networking features

This module explains how to implement an advanced networking infrastructure.

Lab 1: Implementing DHCP

- Planning a DHCP server implementation
- Implementing the DHCP configuration
- Validating the DHCP implementationAfter completing module 2, students will be able to:
- Explain the DHCP server role.
- Deploy DHCP.
- Manage and troubleshoot DHCP.

Module 3: Implementing IPv6

This module explains how to implement IPv6, and how to integrate IPv6 and IPv4 networks.

Lessons M3

- Overview of IPv6 addressing
- Configuring an IPv6 host
- Implementing IPv6 and IPv4 coexistence
- Transitioning from IPv4 to IPv6

Lab 1: Configuring and evaluating IPv6 transition technologies

- Reviewing the default IPv6 configuration
- Implementing DHCPv6
- Configuring network integration by using ISATAP
- Configuring native IPv6 connectivity
- Configuring 6to4 connectivityAfter completing module 3, students will be able to:
- Describe the features and benefits of IPv6.
- Configure an IPv6 host.
- Implement the coexistence between IPv4 and IPv6 networks.
- Transition from an IPv4 network to an IPv6 network.

Module 4: Implementing DNS

This module explains how to install, configure, and troubleshoot DNS within the organization's network.

Lessons M4

- Implementing DNS servers
- Configuring zones in DNS
- Configuring name resolution between DNS zones
- Configuring DNS integration with Active Directory Domain Services (AD DS)
- Configuring advanced DNS settings

access in Windows Server and how to implement Web Application Proxy.

Lessons M6

- Overview of remote access
- Implementing the Web Application Proxy

Lab 1: Implementing Web Application Proxy

- Implementing Web Application Proxy
- Validating the Web Application Proxy deploymentAfter completing module 6, students will be able to:
- Describe remote access.
- Implement Web Application Proxy.

Module 7: Implementing DirectAccess

This module explains how to implement and manage DirectAccess in Windows Server.

Lessons M7

- Overview of DirectAccess
- Implementing DirectAccess by using the Getting Started Wizard
- Implementing and managing an advanced DirectAccess infrastructure

Lab 1: Implementing DirectAccess by using the Getting Started Wizard

- Verifying readiness for a DirectAccess deployment
- Configuring DirectAccess
- Validating the DirectAccess deployment

Lab 2: Deploying an advanced DirectAccess solution

- Preparing the environment for DirectAccess
- Implementing the advanced DirectAccess infrastructure
- Validating the DirectAccess deploymentAfter completing module 7, students will be able to:
- Explain DirectAccess and how it works.
- Implement DirectAccess by using the Getting Started Wizard.
- Implement and manage an advanced DirectAccess infrastructure.

Module 8: Implementing VPNs

Lessons M10

- Overview of high performance networking features
- Configuring advanced Microsoft Hyper-V networking features

Lab 1: Configuring advanced Hyper-V networking features

- Creating and using Hyper-V virtual switches
- Configuring and using the advanced features of a virtual switchAfter completing module 10, students will be able to:
- Describe the high performance networking enhancements in Windows Server.
- Configure the advanced Microsoft Hyper-V networking features.

Module 11: Implementing Software Defined Networking

This module explains how to implement SDN.

- Overview of SDN.
- Implementing network virtualization
- Implementing Network Controller

Lab 1: Deploying Network Controller

- Preparing to deploy Network Controller
- Deploying Network Controller

Lab 2: Deploying Network Controller

- Preparing to deploy Network Controller
- Deploying Network ControllerAfter completing module 11, students will be able to:
- Describe SDN.
- Implementing network virtualization.
- Implementing Network Controller.
