

Red Hat System Administration II (RHEL9)

Cursusduur: 5 Dagen Cursuscode: RH134 Trainingsmethode: Virtual Learning

Beschrijving:

Build the skills to perform the key tasks needed to become a full-time Linux administrator

Red Hat System Administration II (RH134) serves as the second part of the RHCSA training track for IT professionals who have taken Red Hat System Administration I (RH124). The course goes deeper into core Linux system administration skills in storage configuration and management, installation and deployment of Red Hat® Enterprise Linux®, management of security features such as SELinux, control of recurring system tasks, management of the boot process and troubleshooting, basic system tuning, and command-line automation and productivity.

Experienced Linux administrators looking for rapid preparation for the RHCSA certification should instead start with RHCSA Rapid Track (RH199).

This course is based on Red Hat Enterprise Linux 9.0.

Virtueel en Klassikaal™

Virtueel en Klassikaal™ is een eenvoudig leerconcept en biedt een flexibele oplossing voor het volgen van een klassikale training. Met Virtueel en Klassikaal™ kunt u zelf beslissen of u een klassikale training virtueel (vanuit huis of kantoor) of fysiek op locatie wilt volgen. De keuze is aan u! Cursisten die virtueel deelnemen aan de training ontvangen voor aanvang van de training alle benodigde informatie om de training te kunnen volgen.

Doelgroep:

This course is geared toward Windows system administrators, network administrators, and other system administrators who are interested in supplementing current skills or backstopping other team members, in addition to Linux system administrators who are responsible for these tasks: Configuring, installing, upgrading, and maintaining Linux systems using established standards and procedures. Providing operational support. Managing systems for monitoring system performance and availability. Writing and deploying scripts for task automation and system administration.

Doelstelling:

- Install Red Hat Enterprise Linux using scalable methods
- Access security files, file systems, and networks
- Execute shell scripting and automation techniques
- Manage storage devices, logical volumes, and file systems
- Manage security and system access
- Control the boot process and system services
- Run containers

Vereiste kennis en vaardigheden:

- Successful completion of Red Hat System Administration I (RH124) is recommended.
- Experienced Linux administrators seeking to accelerate their path toward becoming a Red Hat Certified System Administrator should start with the RHCSA Rapid Track course (RH199).
- RH124 - Red Hat System Administration I (RHEL9)
- RH199 - RHCSA Rapid Track Course (RHEL9)

Examens en certificering

- Red Hat Certified System Administration exam (EX200)
- Red Hat System Administration III: Linux Automation (RH294)

Vervolg cursussen:

- EX200 - Red Hat Certified System Administrator (RHCSA) exam
- RH294 - Red Hat Enterprise Linux Automation with Ansible

Cursusinhoud:

Improve command line productivity	Protect and manage the security of a server by using SELinux.	Manage network security
Run commands more efficiently by using advanced features of the Bash shell, shell scripts, and various utilities provided by Red Hat Enterprise Linux.	Manage logical volumes	Control network connections to services using the system firewall and SELinux rules.
Schedule future tasks	Create and manage logical volumes containing file systems and swap spaces from the command line.	Install Red Hat Enterprise Linux
Schedule commands to run in the future, either one time or on a repeating schedule.	Access network-attached storage	Install Red Hat Enterprise Linux on servers and virtual machines.
Tune system performance	Use the NFS protocol to administer network-attached storage.	Run Containers
Improve system performance by setting tuning parameters and adjusting scheduling priority of processes.	Control the boot process	Obtain, run, and manage simple, lightweight services as containers on a single Red Hat Enterprise Linux server.
Manage SELinux security	Manage the boot process to control services offered and to troubleshoot and repair problems.	

Extra informatie:

Impact on the organization

This training provides your team members with a solid foundation in Linux system administration, helping ensure improved ability to manage your infrastructure efficiently. This helps provide better system reliability, improve efficient system and storage utilization, and faster and more accurate responsiveness to system failures. This is the second of a two course series that takes a computer professional from minimal Linux experience to being a fully capable Linux administrator.

Red Hat has created this course in a way intended to benefit our customers, but each company and infrastructure is unique, and actual results or benefits may vary.

Impact on the individual

As a result of attending this course, you should be able to perform the key tasks needed to become a full-time Linux administrator. Students will be introduced to more advanced administrative topics, such as storage management using LVM, SELinux management, and automated installation. This course goes deeper into enterprise Linux administration, including file systems and partitioning, logical volumes, SELinux, firewall configuration, and troubleshooting.
