

Planning and Implementing a Storage Area Network (SAN)

Duration: 5 Days Course Code: SN71G Delivery Method: Virtual Learning

Overview:

The storage area network (SAN) infrastructure facilitates storage consolidation, data sharing, server clustering, LAN-free and server-less backup across heterogeneous host server platforms. This course focuses on the planning and implementation considerations associated with establishing that SAN infrastructure. Functions provided by SAN fabric components, such as Fibre Channel host bus adapters (HBAs), Fibre Channel switches and directors, and SCSI to Fibre Channel protocol converters are discussed, and the interdependencies of these components are examined. Mechanisms to implement resource access control for data access integrity among heterogeneous hosts in a storage networking environment are also examined.

Virtueel en Klassikaal™

Virtueel en Klassikaal™ is een eenvoudig leerconcept en biedt een flexibele oplossing voor het volgen van een klassikale training. Met Virtueel en Klassikaal™ kunt u zelf beslissen of u een klassikale training virtueel (vanuit huis of kantoor) of fysiek op locatie wilt volgen. De keuze is aan u! Cursisten die virtueel deelnemen aan de training ontvangen voor aanvang van de training alle benodigde informatie om de training te kunnen volgen.

Target Audience:

This course is for personnel who are assessing and planning to deploy a storage area network.

Objectives:

- Examine Fibre Channel services such as login processes, name server, addressing, loop initialization and arbitration, frame routing, and registered state change notification as they relate to configuring the SAN infrastructure
- Plan for the implementation of SAN interconnect components, such as Fibre Channel HBAs, the IBM TotalStorage SAN switches and directors (b-type, m-type), and the Cisco directors and switches by reviewing their default configurations and assessing tailoring options
- Plan for the Implementation of resource access control to ensure data integrity by using zoning interfaces in the IBM TotalStorage SAN switches and directors (b-type, m-type), and the Cisco MDS 9000 directors and switches
- Interpret topology, routing, and trunking data displayed by switch management interfaces for a given fabric

Prerequisites:

Students should:

- Complete the course *Introduction to Storage Networking (SN70G)*
- or equivalent knowledge base

This course assumes that you understand basic SAN knowledge.

Testing and Certification

- [Storage Area Network \(SAN\), Virtualization and Consolidation Techniques](#)

Follow-on-Courses:

- Storage Area Network (SAN), Virtualization and Consolidation Techniques

Content:

- Evolution of storage area network
 - Fibre Channel
 - Fibre Channel switches and directors - Brocade (b-type)
 - Brocade DCFM
 - Fibre Channel switches and directors - Cisco MDS
 - Lab Exercises
-
