

Git and GitLab

Cursusduur: 2 Dagen

Cursuscode: GITLAB

Trainingsmethode: Virtual Learning

Beschrijving:

Git and GitLab Course Overview

English - Please note this course is only available in English.

Nederlands - Let op: deze training is alleen in het Engels beschikbaar.

Français - Veuillez noter que ce cours est uniquement disponible en anglais.

Git is the most widely used version control system, and GitLab is the most popular hosting service for Git repositories. Millions of developers use these tools daily to collaborate with their colleagues.

This course comprises sessions dealing with version control systems, how Git works, installation, managing a local repository, branching, merging, resolving conflicts, pushing to and pulling from a remote repository, rebasing, getting set up on GitLab, forking, pull requests, and managing repositories on GitLab.

Exercises and examples are used throughout the course to give practical hands-on experience with the techniques covered.

Virtueel en Klassikaal™

Virtueel en Klassikaal™ is een eenvoudig leerconcept en biedt een flexibele oplossing voor het volgen van een klassikale training. Met Virtueel en Klassikaal™ kunt u zelf beslissen of u een klassikale training virtueel (vanuit huis of kantoor) of fysiek op locatie wilt volgen. De keuze is aan u! Cursisten die virtueel deelnemen aan de training ontvangen voor aanvang van de training alle benodigde informatie om de training te kunnen volgen.

Doelgroep:

Who will the Course Benefit?

This course will benefit developers who are required to collaborate using Git and GitLab, and any team member otherwise requiring some level of awareness of how these tools work and the associated workflows and best practices.

Doelstelling:

■ Course Objectives

- This course aims to provide the delegate with the skills and knowledge necessary to be able to collaborate on a project under version control, specifically with Git and GitLab.
-

Vereiste kennis en vaardigheden:

- Delegates attending this course should be computer literate and will ideally have some experience working at the command line though this is not essential.
-

Cursusinhoud:

Git and GitLab Training Course Course Contents - DAY 1

Course Introduction

- Administration and Course Materials
- Course Structure and Agenda
- Delegate and Trainer Introductions

Session 1: GETTING STARTED

- What is a VCS?
- The types of VCS
- A short history of Git
- Git vs. Subversion et al.
- The three file states
- The working tree, staging area, and Git DB
- The basic workflow
- Installing Git
- Git config
- Getting help

Session 2: GIT BASICS

- What is a repo?
 - Creating and cloning repos
 - Tracked vs untracked files
 - Checking status
 - Staging new and modified files
 - Ignoring files and directories
 - Viewing changes
 - Committing changes
 - Removing files
 - Renaming files
 - Viewing commit history
 - Undoing changes
 - Managing remotes
 - Tagging
- Git and GitLab Training Course Course Contents - DAY 2

Session 3: BRANCHING

- What is branching?
- Commit objects
- Branches
- The master branch
- Creating a new branch
- HEAD
- Switching between branches
- Divergent history
- Merging
- Resolving conflicts
- Deleting a branch
- Branch management
- Workflows
- Remote branches
- Pushing
- Tracking branches
- Pulling
- Rebasing
- Stashing

Session 4: GITLAB

- What is GitLab?
- Getting set up
- The GitLab flow
- Pull requests
- No fast-forward merge
- Keeping up with upstream
- Creating a new repo
- Adding collaborators
- Free and paying GitLab accounts
- Changing the visibility of a repo
- Deleting a repo
