## Blockchain Ethereum Training: Hands-on Development Bootcamp

**Cursusduur: 4 Dagen    Cursuscode: U67945G**

---

### Beschrijving:

Learn the components of Ethereum and how to setup an Ethereum public network. This course will introduce you to Solidity and how to build a basic app and develop smart contracts through extensive hands-on labs. You'll also review web3 and the Truffle framework before linking everything together by building a full web project with Ethereum.

This course has been meticulously put together and is taught by world-class subject matter experts. Our experts will walk you through deep dive topics including the steps to integrate/develop an application with Ethereum. There are use cases, proof of concepts, as well as interactive hands-on labs.

---

### Doelgroep:

This course is designed for experienced programmers and developers who want a comprehensive deep dive in writing smart contracts and building applications that interact with them.

---

### Doelstelling:

- |                                                   |                                               |
|---------------------------------------------------|-----------------------------------------------|
| ■ What you will learn in this course:             | ■ The Ethereum programming language, Solidity |
| ■ Blockchain basics and the types of Blockchain's | ■ Smart contracts                             |
| ■ The major components of the Ethereum Blockchain | ■ Development of DApp v1.1                    |
- 

### Vereiste kennis en vaardigheden:

This course is highly technical and requires students to be comfortable with coding. To prepare for the class you must:

- Provide your own computer (Mac/PC/Linux) (labs are hosted in a virtual environment)
  - Basic programming skills of C/C++ or JavaScript
-

## Cursusinhoud:

### What is Blockchain and Smart Contracts?

- What is Blockchain and how does it work?
- Bitcoin vs Ethereum
- Smart contract
- How you can use smart contracts?
- Advantages of smart contracts
- Solidity
- Lab
- Types of variables in Solidity
- Public and private code
- Public variables and functions
- Private variables and functions
- Internal functions
- External functions
- Smart contract constructors
- Constant variables
- Setting variables
- Lab challenge

### Smart Contracts with web3.js

- Lab
- Installing and running the Ethereum TestRPC
- Installing web3.js
- Changing the environment in Remix
- Creating the UI
- Using web3.js to connect and interact with the smart contract
- Solution
- Lab challenge

### Smart Contract events with web3.js

- AIM
- Lab
- The current contract
- Defining the smart contract event
- Updating the UI
- Lab challenge

### Functions, Mapping, and Structs

- Theory
- Functions
- Mapping
- Structs
- Lab
- The smart contract
- Creating a modifier
- Using the modifier
- Web3 UI's modifier handling
- Lab
- Creating a struct
- Creating the mapping
- Map addition
- Get from the mapping
- The full contract
- Count from map
- Lab challenge

### Inheritance and Deployment

- Theory
- Object-oriented programming
- Inheritance
- Lab
- Current contract
- Creating a base contract
- Changing from strings to bytes
- Continuing the project
- Installing MetaMask
- Deploy contract to the Ropsten testnet network
- Lab
- Update the HTML form
- Update the JavaScript
- Using the App
- Lab challenge

### Embark Framework and it's Deployment

- Blockchain (Ethereum)
- Decentralized storage (IPFS)
- Decentralized communication
- Web technologies
- Lab
- Installing Embark framework
- Hello World with Embark framework
- First contract deployment with Embark framework

### Solidity Smart Contracts Testing

- Theory
- What is software testing?
- Lab
- Lab challenge

### Contracts Management with Factories

- Theory
- Factory
- Lab
- Lab challenge

### IPFS Files Hosting

- Theory
- IPFS
- File hosting
- Lab
- Get your hosting server
- Install IPFS on the server
- Lab challenge

### End-to-end Development of DApp

- AIM
- Lab
- Setup the project
- Program the smart contract
- Create the front-end of the application
- Deploy the App with IPFS
- Lab challenge
