
WebSphere Application Server V9 Administration

Duration: 3 Days **Course Code: WA590G**

Overview:

This course teaches you the skills that are needed to administer IBM WebSphere Application Server V9. This release of IBM WebSphere Application Server provides enhanced support for standards (notably Java 7 EE), emerging technology, and a choice of development frameworks. In this course, you learn how to configure and maintain IBM WebSphere Application Server V9 in a single-server environment. You learn how to deploy enterprise Java applications in a single computer configuration. In addition, you learn how to work with features of WebSphere Application Server V9, such as the wsadmin scripting interface, security, and performance monitoring.

Target Audience:

This course is designed for administrators who configure and manage web-based applications on WebSphere Application Server. Web administrators, application developers and deployers, security specialists, and application architects can also benefit from this course.

Objectives:

- After completing this course, you should be able to:
 - Relate WebSphere Application Server to the WebSphere family of products
 - Describe the features and standards in WebSphere Application Server V9
 - Describe the use of WebSphere Application Server in cloud, hybrid cloud, and on-premises environments
 - Describe the architectural concepts that are related to WebSphere Application Server
 - Assemble and install server-side Java enterprise applications
 - Use WebSphere administrative tools to configure and manage enterprise applications
 - Use wsadmin scripting
 - Configure WebSphere Application Server security
 - View performance information about server and application components
 - Troubleshoot problems by using problem determination tools and log files
-

Prerequisites:

- Basic operational skills for the Linux operating system
 - Administrative skills for a web server, such as IBM HTTP Server or Apache
 - Basic understanding of cloud concepts, private, public, and hybrid clouds, and traditional on-premises environments
-

Content:

Course introduction	Application assembly	Exercise: Using wsadmin
WebSphere product family overview	Exercise: Assembling an application	WebSphere security
WebSphere Application Server architecture - stand-alone	Application installation	Exercise: Configuring WebSphere Application Server security
Exercise: Profile creation	Exercise: Installing an application	Exercise: Configuring application security
WebSphere Application Server administrative console	Problem determination	Performance monitoring
Exercise: Exploring the administrative console	Exercise: Problem determination	Exercise: Using the performance monitoring tools
Introduction to the PlantsByWebSphere application	Introduction to wsadmin and scripting	Course summary
