

Introduction to Red Hat JBoss Enterprise Application Platform 8 (AD258)

Duration: 2 Days Course Code: AD258

Overview:

An introduction of the features provided by Red Hat JBoss EAP 8, and how to perform basic management of EAP 8 services.

Introduction to Red Hat JBoss Enterprise Application Platform 8 introduces you to the features of Red Hat JBoss Enterprise Application Platform (JBoss EAP) 8. Through hands-on labs, learn some essential, real-world tasks that a system administrator needs to know to effectively deploy and manage applications on JBoss EAP.

This course provides an introduction to the latest Red Hat JBoss EAP features, and presents the options to evolve JakartaEE infrastructures by migrating, refactoring, or redeploying the existing applications to different platforms.

AD258 helps an organization to decide how to evolve its JakartaEE infrastructure by focusing in three areas: **The migration and migration tools to move the applications and the application servers to JBoss EAP 8** **The new Elytron security subsystem** **Use JBoss EAP on hybrid clouds, with focus on Red Hat OpenShift**

This course is based on Red Hat JBoss® Enterprise Application Platform 8.0.

Note : Starting January 1, 2026, Red Hat introduces RHLS-Course — a flexible subscription model now included with this catalog offering. This replaces the previous direct virtual class enrollment from Global Knowledge.

When you purchase this item, you'll receive an RHLS subscription at the course level, giving you the freedom to choose the schedule that works best and self-enroll in your selected class.

Your RHLS subscription includes:

- One live, instructor-led virtual session
- 12 months of self-paced learning access
- One certification exam with a free retake

Onsite Classroom-based sessions and closed course options remain unchanged.

Updated Jan2026

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

System administrators that manage Java application servers Developers that create JakartaEE applications Automation architects, cloud administrators, and platform engineers that design and automatize the organizations Java applications infrastructure

Objectives:

- After this course participants should be able to:
 - Migrate to Elytron
- Install and Manage Red Hat JBoss Enterprise Application Platform 8
 - Use TLS in Management and HTTP interfaces
 - Use RBAC in management and HTTP interfaces
- Migrate to JBoss EAP:
 - JBoss EAP on OpenShift:
 - Deploy JBoss EAP Applications on Hybrid Clouds
 - Configure and Trimm JBoss EAP for Applications on OpenShift
- Identify the Main Points in a Migration to JBoss EAP 8
 - Use the JBoss EAP Operator
- Manage the Migration Toolkit for Applications (MTA)
- Use the Server Migration Tool
- JBoss EAP Security:
 - Understand Elytron and the JBoss EAP Security

Prerequisites:

- Basic experience in Linux is required, or completion of the Red Hat System Administration I (RH124) course
 - Basic programming concepts related to Java, and JakartaEE/JavaEE specifications is required, or completion of the Red Hat Application Development I: Programming in Java EE (AD183) course
 - Basic JBoss EAP administration experience is required
 - Basic Red Hat OpenShift or Kubernetes experience is required
- Take Red Hat free assessment to gauge whether this offering is the best fit for your skills [Red Hat Skills Assessment](#)

Testing and Certification

■

Follow-on-Courses:

None

Content:

Installing and Managing Red Hat JBoss Enterprise Application Platform 8

Install and manage a Red Hat JBoss Enterprise Application Platform server, and explore a key set of the latest features that it provides

Migration to JBoss EAP: Identifying the Main Points in a Migration to JBoss EAP 8

Describe the main issues to consider in a migration to JBoss EAP 8

Migration to JBoss EAP: Migration Toolkit for Applications (MTA)

Analyze applications, measure migration efforts, and refactor Java package names by using the Migration Toolkit for Applications (MTA)

Migration to JBoss EAP: Server Migration Tool

Migrate server configurations from previous JBoss EAP versions by using the JBoss EAP Server Migration Tool

JBoss EAP Security: Introduction to Elytron and the JBoss EAP Security

Describe the JBoss EAP security architecture, and learn to use Elytron tools

JBoss EAP Security: Migration to Elytron

Identify legacy security components that need to migrate to Elytron, and use the Elytron CLI tool to help with the migration

JBoss EAP Security: TLS in Management and HTTP interfaces

Configure and manage TLS connections on JBoss EAP servers to applications and to the management interfaces

JBoss EAP Security: RBAC in management and HTTP interfaces

Configure role-based authorization for all the exposed interfaces on a JBoss EAP server

JBoss EAP on OpenShift: Deploy JBoss EAP Applications on Hybrid Clouds

Deploy JBoss EAP applications on hybrid clouds, including public clouds and container-based OpenShift environments, by using either the Maven plug-in or a Helm chart

JBoss EAP on OpenShift: Configuring and Trimming JBoss EAP for Applications on OpenShift

Configure JBoss EAP applications and trim the capabilities of their JBoss EAP runtimes on OpenShift in order to optimize performance and improve security, by using environment variables and Helm charts

JBoss EAP on OpenShift: The JBoss EAP Operator

Install the JBoss EAP operator on OpenShift, and use it to deploy and monitor JBoss EAP applications
