

Red Hat Ansible Automation Platform Boot Camp (AU710)

Duration: 10 Days Course Code: AU710

Overview:

Learn how to automate Linux system administration tasks with Red Hat Ansible Automation Platform and manage complex automation workflows at scale and prevent single points of failure.

The Ansible Automation Platform Boot Camp (AU710) is designed for Linux administrators and developers who need to automate repeatable and error-prone steps for system provisioning, configuration, application deployment, and orchestration.

Learn recommended practices for automation development using reusable code, advanced playbook techniques, shared execution environments, and preparing for scalable automation with the automation content navigator.

Deploy automation controller to centrally manage automation workflows, automation mesh to scale up and distribute execution capacity, and private automation hub to manage Ansible Content Collections and automation execution environments for use by automation developers.

This collection of courses is based on Red Hat Ansible Automation Platform 2.5.

Note: Starting January 2026 this course only exists in CR (classroom) if scheduled or Closed course modalities - No RHLS-Course for this course.

As part of enrollment, you will receive one year of Red Hat Learning Subscription Standard, which gives you unlimited access to all RedHat courses in E-learning self-paced, plus up to five certification exams.

Updated Jan2026

Company Events

These events can be delivered exclusively for your company at our locations or yours, specifically for your delegates and your needs. The Company Events can be tailored or standard course deliveries.

Target Audience:

This course is geared toward Linux system administrators, DevOps engineers, Site Reliability Engineers, infrastructure automation engineers, and developers who are responsible for repeatable tasks such as: Automating configuration management Ensuring consistent and repeatable application deployment Provisioning and deployment of development, testing, and production servers Integrating with DevOps continuous integration/continuous delivery workflows

Objectives:

- After this course participants should be able to:
- Install Red Hat Ansible Automation Platform on control nodes.
- Create and update inventories of managed hosts and managing connections to them.
- Automate administration tasks with Ansible Playbooks.
- Write effective playbooks at scale.
- Protect sensitive data used by Ansible Automation Platform with Ansible Vault.
- Reuse code and simplify playbook development with Ansible Roles and Ansible Content Collections.
- Apply recommended practices for effective and efficient automation with Ansible.
- Perform automation operations as rolling updates.
- Use advanced features of Red Hat Ansible Automation Platform to work with data, including filters and plugins.
- Create automation execution environments to contain and scale Red Hat Ansible Automation.
- Leverage capabilities of the automation content navigator to develop Ansible Playbooks.
- Discuss of the architecture of Red Hat Ansible Automation Platform 2.
- Install and configure automation controllers and private automation hubs to centrally coordinate and scale Red Hat Ansible Automation.
- Integrate Red Hat Ansible Automation Platform with centralized Git repository services such as GitLab.
- Handle management of users, teams, and access permissions in Red Hat Ansible Automation Platform services.
- Create and manage workflows that execute automation based on the success or failure of previous jobs
- Perform troubleshooting and maintenance of Red Hat Ansible Automation Platform services.
- Discuss of recommended practices to ensure high availability and

scalability of a large automation cluster.

Prerequisites:

- Be a Red Hat Certified System Administrator (RHCSA), or demonstrate equivalent experience
- Take Red Hat free assessment to gauge whether this offering is the best fit for your skills [Red Hat Skills Assessment](#)

Testing and Certification

- Red Hat Certified Engineer (RHCE) exam - EX294
 - Red Hat Certified Specialist in Developing Automation with Ansible Automation Platform exam - EX374
 - Red Hat Certified Specialist in Managing Automation with Ansible Automation Platform exam - EX467
-

Follow-on-Courses:

None

Content:

Introducing Red Hat Ansible Automation Platform	Develop Playbooks with Ansible Automation Platform 2	Installing Red Hat Ansible Automation Platform
Describe the fundamental concepts of Red Hat Ansible Automation Platform and how it is used, and install Red Hat Ansible Automation Platform.	Develop Ansible Playbooks with Red Hat Ansible Automation Platform 2 following recommended practices.	Explain what Red Hat Ansible Automation Platform is and perform a basic installation of automation controller and automation hub.
Implementing an Ansible playbook	Manage Content Collections and Execution Environments	Managing User Access
Create an inventory of managed hosts, write a simple Ansible playbook, and run the playbook to automate tasks on those hosts.	Run playbooks that use Ansible Content Collections not included in Ansible Core, either from an existing execution environment or by downloading them from automation hub.	Create user accounts and organize them into teams/groups in automation controller and automation hub, and assign them permissions to administer and access resources in each service.
Managing variables and facts	Run Playbooks with Automation Controller	Managing Inventories and Machine Credentials
Write playbooks that use variables to simplify management of the playbook and facts to reference information about managed hosts.	Explain what automation controller is and use it to run playbooks that you developed with automation content navigator.	Create inventories of machines to manage, and configure credentials necessary for automation controller's execution nodes to log in and run Ansible jobs on those systems.
Implementing task control	Work with Ansible Configuration Settings	Managing Projects and Launching Ansible Jobs
Manage task control, handlers, and task errors in Ansible playbooks.	Examine and adjust the configuration of Ansible and automation content navigator to simplify development and to troubleshoot issues.	Create projects and job templates in the web UI, using them to launch Ansible Playbooks that are stored in Git repositories, in order to automate tasks on managed hosts.
Deploying files to managed hosts	Manage Inventories	Advanced Job Configuration
Deploy, manage, and adjust files on hosts managed by Ansible Automation Platform.	Manage inventories by using advanced features of Ansible.	Configure advanced features of automation controller in order to more effectively and efficiently implement jobs.
Managing complex plays and playbooks	Manage Task Execution	Constructing Job Workflows
Write playbooks for larger, more complex plays and playbooks.	Control and optimize the execution of tasks by Ansible Playbooks.	Use advanced features of job templates to improve performance, simplify the customization of jobs, launch multiple jobs, schedule automatically recurring jobs, and provide notification of job results.
Simplifying playbooks with roles	Transform Data with Filters and Plugins	Managing Advanced Inventories
Use Ansible Automation Platform roles to develop playbooks more quickly and to reuse Ansible Automation Platform code.	Populate, manipulate, and manage data in variables using filters and plug-ins.	Manage inventories that are generated dynamically from scripts or the automation controller smart inventory feature.
Troubleshooting Red Hat Ansible Automation Platform	Coordinate Rolling Updates	
Troubleshoot playbooks and managed hosts.	Use advanced features of Ansible to manage rolling updates in order to minimize downtime and to ensure maintainability and simplicity of	
Automating Linux administration tasks		

Automate common Linux system administration tasks with Ansible Automation Platform.

Ansible Playbooks.

Create Content Collections and Execution Environments

Write your own Ansible Content Collections, publish them, embed them in a custom automation execution environment, and run them in playbooks by using automation controller.

Automating Configuration of Ansible Automation Platform

Automate the configuration and deployment of Red Hat Ansible Automation Platform services by using Ansible Content Collections, the automation controller API, and Git webhooks.

Maintaining Red Hat Ansible Automation Platform

Perform routine maintenance and administration of Red Hat Ansible Automation Platform.

Additional Information:

Official course book provided to participants

If participants prefer to attend virtual classes, they can sign-up for individual RHLS-courses covered by this bootcamp: Red Hat Certified Engineer (RHCE) AU294LS Developing Automation with Ansible Automation Platform - AU374LS Managing Automation with Ansible Automation Platform exam - AU467LS or purchase a RHLS Premium subscription giving access to all virtual classes organized by Red Hat. Contact us.
