
Machine Learning Engineering on AWS

Duration: 3 Days Course Code: GK910029

Overview:

Machine Learning (ML) Engineering on Amazon Web Services (AWS) is a 3-day intermediate course designed for ML professionals seeking to learn machine learning engineering on AWS.

Participants learn to build, deploy, orchestrate, and operationalize ML solutions at scale through a balanced combination of theory, practical labs, and activities. Participants will gain practical experience using AWS services such as Amazon SageMaker AI and analytics tools such as Amazon EMR to develop robust, scalable, and production-ready machine learning applications.

Updated August 2026

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

This course is intended for:

- DevOps Engineers
 - Cloud Developers
-

Objectives:

■ **In this course participants will learn:**

- Explain ML fundamentals and its applications in the AWS Cloud.
 - Process, transform, and engineer data for ML tasks by using AWS services.
 - Select appropriate ML algorithms and modeling approaches based on problem requirements and model interpretability.
 - Design and implement scalable ML pipelines by using AWS services for model training, deployment, and orchestration.
 - Create automated continuous integration and delivery (CI/CD) pipelines for ML workflows.
 - Discuss appropriate security measures for ML resources on AWS.
 - Implement monitoring strategies for deployed ML models, including techniques for detecting data drift.
-

Prerequisites:

Participants should have:

- Familiarity with basic machine learning concepts
- Working knowledge of Python programming language and common data science libraries such as NumPy, Pandas, and Scikit-learn
- Basic understanding of cloud computing concepts and familiarity with AWS
- Experience with version control systems such as Git (beneficial but not required)

Testing and Certification

None

Follow-on-Courses:

- GK0630 - Practical Data Science with Amazon SageMaker
- GK7395 - MLOps Engineering on AWS

Content:

Day 1	Day 2	Module 9: Securing AWS Machine Learning (ML) Resources
Module 0: Course Introduction	Module 5: Choosing a Modeling Approach	■ Access control ■ Network access controls for ML resources ■ Security considerations for CI/CD pipelines
Module 1: Introduction to Machine Learning (ML) on AWS	■ Amazon SageMaker AI built-in algorithms ■ Selecting built-in training algorithms ■ Amazon SageMaker Autopilot ■ Model selection considerations ■ ML cost considerations	Module 10: Machine Learning Operations (MLOps) and Automated Deployment
■ Introduction to ML ■ Amazon SageMaker AI ■ Responsible ML	Module 6: Training Machine Learning (ML) Models	■ Introduction to MLOps ■ Automating testing in CI/CD pipelines ■ Continuous delivery services ■ Lab 6: Using Amazon SageMaker Pipelines and the Amazon SageMaker Model Registry with Amazon SageMaker Studio
Module 2: Analyzing Machine Learning (ML) Challenges	■ Model training concepts ■ Training models in Amazon SageMaker AI ■ Lab 3: Training a model with Amazon SageMaker AI	Module 11: Monitoring Model Performance and Data Quality
■ Evaluating ML business challenges ■ ML training approaches ■ ML training algorithms	Module 7: Evaluating and Tuning Machine Learning (ML) models	■ Detecting drift in ML models ■ SageMaker Model Monitor ■ Monitoring for data quality and model quality ■ Automated remediation and troubleshooting ■ Lab 7: Monitoring a Model for Data Drift
Module 3: Data Processing for Machine Learning (ML)	■ Evaluating model performance ■ Techniques to reduce training time ■ Hyperparameter tuning techniques ■ Lab 4: Model Tuning and Hyperparameter Optimization with Amazon SageMaker AI	Module 12: Course Wrap-up
■ Data preparation and types ■ Exploratory data analysis ■ AWS storage options and choosing storage	Module 8: Model Deployment Strategies	
Module 4: Data Transformation and Feature Engineering	■ Deployment considerations and target options ■ Deployment strategies ■ Choosing a model inference strategy ■ Container and instance types for inference ■ Lab 5: Shifting Traffic A/B	
■ Handling incorrect, duplicated, and missing data ■ Feature engineering concepts ■ Feature selection techniques ■ AWS data transformation services ■ Lab 1: Analyze and Prepare Data with Amazon SageMaker Data Wrangler and Amazon EMR ■ Lab 2: Data Processing Using SageMaker Processing and the SageMaker Python SDK	Day 3	

Additional Information:

Activities

This course includes presentations, hands-on labs, demonstrations, and group exercises.
