Masterclass: PowerShell for Digital Investigation & Threat Hunting

Duration: 4 Days **Course Code: PST**

Overview:

This advanced course equips cybersecurity professionals with the skills to detect, investigate, and respond to modern threats using native Windows tools and PowerShell. With a strong focus on real-world attacker behaviors, participants will learn to identify Advanced Persistent Threats (APTs), analyze attack timelines, and uncover hidden or deleted artifacts using forensic techniques.
PowerShell is used throughout the course as both a defensive and investigative tool, supporting artifact collection, process and network analysis, registry inspection, and script-based detection. Participants will explore common attacker techniques such as living-off-the-land binaries (LOLBins), scheduled tasks, and encoded payloads, and learn how to detect and counter them through logging, event analysis, and behavioral detection rules.

Target Audience:

This course is designed for security professionals across offensive, defensive, and hybrid roles. Analysts, hunters, SOC teams, and incident responders will learn to enhance investigations with AI-driven workflows. Red and purple teamers will strengthen adversary emulation and detection validation, while engineers and developers gain hands-on experience building AI-powered tools, pipelines, and multi-agent systems. Security leaders and architects will benefit from practical insights into securing AI systems and addressing emerging vulnerabilities.

Objectives:

- Investigate advanced persistent threats (APTs) using PowerShell and native Windows tools.
- Perform digital forensics and artifact collection for incident investigations.
- Analyze process, network, and registry artifacts to identify malicious activity.
- Implement PowerShell logging, detection, and threat hunting techniques.
- Conduct Active Directory enumeration and investigate fileless attacks.
- Apply real-world threat hunting and incident response techniques through hands-on exercises.

Prerequisites:

- Basic understanding of Windows systems and cybersecurity fundamentals
- Familiarity with PowerShell, networking, and Active Directory is recommended
- Prior experience in system or security administration is an advantage

Testing and Certification

- After completing the course, participants will receive a CQURE Certificate of Completion and will also be eligible for CPE points.

Content:

Module 1: APT Attacks ; Investigation

Module 2: PowerShell 101 for Blue Teams

Module 3: Understanding Information Gathering and Timelining

Module 4: PowerShell for Digital Forensics ; Artifact Collection

Module 5: Process ; Network Artifact Collection

Module 6: PowerShell Logging ; Detection

Module 7: Threat Hunting with WMI ; Scheduled Tasks

Module 8: PowerShell for Enterprise

Module 9: Hands-On Threat Hunting Case Study

Module 10: Active Directory Enumeration with PowerShell

Module 11: Red Teaming Tactics with PowerShell

Module 12: Complete Fileless Attack Analysis Walkthrough
