

Quality for Project Managers

Duration: 4 Days **Course Code: 2808**

Overview:

"Finished" Isn't Enough: Learn the Importance of Quality.

In this course, you will learn how to develop or improve the quality programs at your workplace. You will use systems thinking to plan quality into your project, prioritize requirements to meet customers' quality needs, select quality assurance and quality control activities that are tailor-fit to your project, and use quality management processes, tools, and metrics to increase the likelihood of project success. You will use a Quality Management Plan to document and structure a thoughtful approach to project quality management. You will gain insight into applying quality planning, quality assurance, and quality control to real-world projects.

Students pursuing a university-recognized and/or accredited certificate in Canada or continuing education units in the US must attend at least 90% of class time, participate in class exercises and section-knowledge checks, and score at least 70% on an end-of-class, multiple-choice assessment.

Target Audience:

Associate project managers, project managers, IT project managers, project coordinators, project analysts, project leaders, senior project managers, quality assurance team members, product managers, and program managers.
