
IT Project Management

Duration: 4 Days Course Code: 2819

Overview:

We used our years of experience training IT professionals to develop a course uniquely suited to the needs of the IT professional. Students of this project management training course report major improvements in project estimation, increased credibility with their customers, effective risk management, better control over scope creep, and an overall satisfaction with the positive impact on their company's operations. Learn the fundamentals and best practices of project management methodology as applied to IT initiatives, and practice and master the skills you need to deliver IT projects on time, within budget, and to specification. Examine all aspects of IT projects, including hardware, software, vendor relationships, communicating with different audiences, and working with virtual teams. Learn to determine project scope through effective requirements identification, set and manage stakeholder expectations, identify and manage IT risks, and meet quality standards. Learn how to overcome the most common pitfalls of IT project success. Students pursuing a university-recognized and/or accredited certificate in Canada or continuing education units in the US must attend at least 90% of class time, participate in class exercises and section-knowledge checks, and score at least 70% on an end-of-class, multiple-choice assessment.

Target Audience:

IT professionals, IT project managers, IT managers, IT project team members, associate project managers, project managers, project coordinators, project analysts, project leaders, senior project managers, team leaders, product managers, and program managers.
