Certified ScrumMaster

Duration: 2 Days Course Code: GKCSM

Overview:

Scrum is an agile framework for maximising the value of product development. This may take the form of a project but Scrum is designed to be applicable to both project and non-project environments. Scrum uses an empirical approach based on iterative and incremental development with regular feedback to enable maximisation of return on investment.

Target Audience:

If you are going to be a ScrumMaster or be part of a Scrum team, or if you are going to lead one or more Scrum teams or are going to interact with one of more Scrum teams to support activities such as recruitment or procurement; this course will provide the understanding you need to help the team to maximise its performance.

Objectives:

- A Scrum team maximises value to its customers, users and organisation through the regular and frequent delivery of valuable product features. Scrum teams build a regular cadence of delivery in short time frames, typically between 1 and 4 weeks for each delivery cycle.
- On this course you will learn how to effectively apply the Scrum framework, whether you are the Scrum Master, the Product Owner or a Team Member. Through a number of hands on exercises you will practise all aspects of the Scrum framework in a fun, exhilarating and interactive environment. You will also learn some of the common impediments experienced by teams adopting Scrum and strategies to overcome these.

Prerequisites:

- None are mandatory however we recommend reading the Scrum Guide prior to attending this course (available at www.scrumguides.org)

Testing and Certification

- Participants who successfully complete the course will be invited to take Scrum Alliance's CSM Exam. After passing the exam, participants will be designated Certified ScrumMaster (CSM) and will also receive 2 years membership of Scrum Alliance.
- Participants will also be able to work towards becoming a Certified Scrum Professional (CSP).

Content:
