## Veritas Storage Foundation Cluster File System High Availability 6.0.1 for Linux: Administration

**Duration: 3 Days    Course Code: HA0426**

---

### Overview:

The Veritas Storage Foundation Cluster File System High Availability 6.0.1: Administration course provides instructions on how to install, configure, verify, and troubleshoot Veritas Storage Foundation Cluster File System High Availability configurations. You will learn how the core component products of SFCFSHA, such as Veritas Cluster Volume Manager, Veritas Cluster File System, and Veritas Cluster Server are combined to manage volumes and file systems in a shared configuration.

---

### Target Audience:

This course is for customers, support engineers, consultants, and partners who need to maintain and troubleshoot Veritas Storage Foundation Cluster File System.

---

### Objectives:

- |   |   |
|---|---|
| <p>■ <b>By the end of this course, you will be able to:</b></p> <ul style="list-style-type: none"><li>■ • Install Veritas Storage Foundation Cluster File System High Availability.</li><li>■ • Configure a CFS cluster according to a specified sample design.</li><li>■ • Configure shared disk groups and volumes.</li><li>■ • Configure shared file systems.</li><li>■ • Describe how Group Lock Manager ensures file system coherency.</li></ul> | <ul style="list-style-type: none"><li>■ • Manage shared resources with Veritas Cluster Server (VCS).</li><li>■ • Place application instances under VCS control.</li><li>■ • Configure I/O fencing for data protection.</li><li>■ • Create and use point-in-time copies.</li><li>■ • Cluster NFS shares.</li><li>■ • Troubleshoot common cluster failures.</li></ul> |
|---|---|
- 

### Prerequisites:

- - Veritas Storage Foundation 6.0 for UNIX: Administration
    - Veritas Cluster Server 6.0 for UNIX: Administration
-

## Content:

### Storage Foundation and High Availability Concepts

- Storage Foundation Concepts

- High availability concepts

- Cluster communication

- VCS architecture

- SFCFSHA basics

### Installing and Configuring SFCFSHA

- SFCFSHA editions and licensing methods

- Preparing to install SFCFSHA

- Installing and configuring SFCFSHA

- Upgrading to SFCFSHA 6.0.1

- Verifying SFCFSHA configuration

- Administrative interfaces

### SFCFSHA Architecture

- Characteristics of shared data clusters

- SFCFSHA architectural overview

- Applications for SFCFSHA

### Cluster Volume Manager

- VxVM and CVM overview

- CVM concepts

- CVM configuration

### Cluster File System

- Cluster file system concepts

- Data flow in CFS

- Group Lock Manager

- Administering CFS

### SFCFSHA Recovery

- Configuration changes and master failover

- Recovery in a CVM cluster

### High Availability in SFCFSHA

- Role of VCS in an SFCFSHA cluster

- Placing shared resources under VCS control

- Configuring shared resources

- Managing an SFCFSHA cluster using VCS

### I/O fencing

- Data protection requirements

- I/O fencing concepts and components

- I/O fencing operations

- I/O fencing implementation

- Configuring I/O fencing

- Recovering fenced systems

### Troubleshooting

- SFCFSHA cluster startup and shutdown

- Troubleshooting SFCFSHA clusters

- Collecting diagnostic information

- Troubleshooting I/O fencing

- Troubleshooting SFCFSHA installation and upgrade

### Point-in-time Copies in SFCFSHA

- Reviewing the point-in-time copy solutions provided by SF

- Using the point-in-time copy solutions in an SFCFSHA environment

### Clustered NFS

- Overview of file serving solutions

- CNFS concepts

- VCS components for CNFS

- Configuring clustered NFS shares
