## Junos Unified Threat Management

**Duration: 1 Day    Course Code: JUTM**

---

### Overview:

This one-day course includes detailed coverage of Web filtering, antivirus (AV), antispam, and content filtering. Through demonstrations and hands-on labs, students will gain experience in configuring and monitoring the Unified Threat Management (UTM) features of the Junos operating system.

This course is based on the Junos OS Release 12.1X47-D30.4. Junos Unified Threat Management (JUTM) is an intermediate-level course.

---

### Target Audience:

This course benefits individuals responsible for implementing and monitoring the UTM features available on branch SRX Services Gateways and J Series Services Routers.

---

### Objectives:

■ **After you complete this course you will be able to:**

- |  |   |
|--|---|
| ■ Describe the challenges that branch offices present to network managers.               | ■ Describe the differences between full file-based AV versus express AV.                    |
| ■ List the major features that UTM offers.   | ■ Describe the settings that are required for configuring AV protection.                    |
| ■ Explain how each major feature addresses the challenges of the branch office.          | ■ Explain how these settings affect scanning performance and effectiveness.                 |
| ■ List the SRX Series Services Gateways hardware devices on which UTM is available.      | ■ Describe options available for scanning supported protocols.                              |
| ■ Describe the UTM features that require specific licenses.                              | ■ List the general steps required to configure AV.  |
| ■ Define terms used in the creation of effective antispam UTM policies.                  | ■ Describe the statistical information available to verify AV functionality.                |
| ■ Describe the process by which UTM examines traffic for spam.                           | ■ Describe content and Web filtering and their purpose.                                     |
| ■ Describe the overall process of configuring an antispam UTM policy.                    | ■ List and describe each of the parameters used when configuring Web and content filtering. |
| ■ Describe the kinds of information available from the device when it has detected spam. | ■ Describe in general terms the steps necessary to configure web and content filtering.     |
| ■ Describe how the AV process examines traffic.  | ■ Monitor Web and content filtering.  |
- 

### Prerequisites:

Students should have basic networking knowledge and an understanding of the Open Systems Interconnection (OSI) model and the TCP/IP protocol suite. Students should also have working knowledge of security policies.

Students should also attend the Introduction to the Junos Operating System (IJOS), Junos Routing Essentials (JRE), and Junos Security (JSEC) courses prior to attending this class.

---

## Content:

### Chapter 1: Course Introduction

### Chapter 2: UTM Overview

- Branch Office Challenges
- UTM Feature Overview
- Design Basics
- Hardware Support
- Licensing of Features
- Lab 1: Initial Setup

### Chapter 3: Antispam

- Antispam Terminology
- Overview of Antispam Process
- UTM Policy Overview
- Configuration Steps
- Monitoring Antispam
- Lab 2: Antispam

### Chapter 4: Antivirus Protection

- Antivirus Terminology
- Overview of Antivirus Process
- AV Operation
- Full File-based AV Configuration
- Express AV Configuration
- Monitoring AV
- Lab 3: Antivirus

### Chapter 5: Content and Web Filtering

- Overview and Terminology
- Configuration
- Verification and Monitoring
- Lab 4: Configuring Content Filtering and Web Filtering

---
