

## VMware vSphere: Design

**Duration: 3 Days**    **Course Code: VSD**    **Version: 8.0**    **Delivery Method: Virtual Classroom**

### Overview:

This three-day course equips you with the knowledge, skills, and abilities to design a VMware vSphere 8 virtual infrastructure. You follow a proven approach to design a virtualization solution that ensures availability, manageability, performance, recoverability, and security. The approach presented follows VMware best practices. This course discusses the benefits and risks of available design alternatives and provides information to support making sound design decisions.

Product Alignment • VMware ESXi 8.0 • VMware vCenter 8.0

### Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

### Target Audience:

System integrators, Consultants, Solution architects

### Objectives:

- By the end of the course, you should be able to meet the following objectives:
- • Create a vSphere design given a case study
- • Identify and assess the business objectives of the vSphere environment
- • Identify business requirements, constraints, assumptions, and risks, for all layers in the vSphere environment
- • Apply a framework to a design
- • Analyze design choices for vCenter, ESXi, storage, networking, vSphere clusters, and virtual machines
- • Identify design decisions to ensure manageability, which include scalability, capacity planning and lifecycle management
- • Identify design decisions to ensure that the vSphere environment is highly available
- • Identify design decisions to ensure that the vSphere environment performs well
- • Identify design decisions to ensure that the vSphere environment is secure
- • Identify design decisions to ensure that the vSphere environment can recover from data loss or disaster

### Prerequisites:

This course requires completion of the one of the following:

• [VMware vSphere: Install, Configure, Manage](#) • [VMware vSphere: Operate, Scale, and Secure](#)

- VSICM - VMware vSphere: Install, Configure, Manage [V7.0]
- VSOS - VMware vSphere: Optimize & Scale
