
VMware vSphere: Install, Configure, Manage [V7.0]

Duration: 5 Days **Course Code: VSICM** **Version: 7.0**

Overview:

This five-day VMware vSphere foundation course features intensive hands-on training that focuses on installing, configuring, and managing VMware vSphere® 7, which includes VMware ESXi™ 7 and VMware vCenter Server® 7. This VMware course prepares you to administer a vSphere infrastructure for an organization of any size.

This course is the foundation for most of the other VMware technologies in the software-defined data center.

This course aligns to the following products: ESXi 7, vCenter Server 7

Please Note: This training is also suitable for students who want to be trained on vSphere v6.5 or v6.7.

Target Audience:

System engineers and administrators involved in the administration of a VMware vSphere solution.

Objectives:

- **After completing this course you should be able to:**
 - Describe the software-defined data center (SDDC)
 - Explain the vSphere components and their function in the infrastructure
 - Install and configure VMware ESXi™ hosts
 - Deploy and configure VMware vCenter® Server Appliance™
 - Use VMware vSphere® Client™ to manage the vCenter Server inventory and the vCenter Server configuration
 - Manage, monitor, back up, and protect vCenter Server Appliance
 - Create virtual networks with vSphere standard switches
 - Describe the storage technologies supported by vSphere
 - Configure virtual storage using iSCSI and NFS storage
 - Create and manage VMware vSphere® VMFS datastores
 - Use the vSphere Client to create virtual machines, templates, clones, and snapshots
 - Create a content library and deploy virtual machines from templates in the library
 - Manage virtual machine resource use
 - Migrate virtual machines with VMware vSphere® vMotion® and VMware vSphere® Storage vMotion®
 - Create and manage a vSphere cluster that is enabled with VMware vSphere® High Availability and VMware vSphere® Distributed Resource Scheduler™
