

Junos Intermediate Routing (JIR)

Duration: 3 Days **Course Code:** JUN_JIR **Delivery Method:** Virtual Learning

Overview:

This three-day course provides students with intermediate routing knowledge and configuration examples. The course includes an overview of protocol-independent routing features, OSPF, IS-IS, BGP, routing policy, IP tunneling, load balancing, high availability (HA) features, VRRP, and IPv6.

Through demonstrations and hands-on labs, students will gain experience in configuring and monitoring Junos OS and monitoring device operations. This course uses Juniper Networks vSRX Series Services Gateways for the hands-on component, but the lab environment does not preclude the course from being applicable to other Juniper hardware platforms running Junos OS.

This course is based on Junos OS Release 23.4R1

Course Level: Intermediate

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

This course benefits individuals responsible for configuring and monitoring devices running Junos OS.

Objectives:

- Describe how routes enter a routing table, and how routers choose the best routes for forwarding traffic.
- Implement static routing within Junos OS.
- Describe OSPF within Junos OS.
- Describe how routing policies control what prefixes can enter the routing table and what prefixes can be advertised by protocols.
- Deploy OSPF within Junos OS.
- Implement IS-IS within Junos OS.
- Implement BGP within Junos OS.
- Deploy BGP within Junos OS.
- Describe some important advanced routing policy features and behaviors.
- Implement routing instances within Junos OS.
- Implement load balancing within Junos OS.
- Implement VRRP within Junos OS.
- Implement graceful routing and Bidirectional Forwarding Detection (BFD) within Junos OS.
- Implement high availability features—GRES, NSR, and unified ISSU— within Junos OS.
- Implement IP tunneling within Junos OS.
- Describe IPv6 within Junos OS.
- Implement filter-based forwarding (FBF) within Junos OS.

Prerequisites:

- Basic networking knowledge and an understanding of the OSI model and the TCP/IP protocol suite
- Completion of the Introduction to the Junos Operating System course prior to attending this class

Testing and Certification

JNCIS-ENT exam topics are based on the content of the recommended instructor-led training courses, as well as the additional resources.

- Exam code: JN0-348
- Written exam
- Administered by Pearson VUE
- Exam length: 90 minutes

- Exam type: 65 multiple-choice questions
 - Pass/fail status is available immediately
 - Software Release:
 - o Junos 18.4
 - o Junos Space Network Director 3.1
- The JNCIS-ENT certification is valid for three years.
JNCIS-SP exam topics are based on the content of the recommended instructor-led training courses, as well as the additional resources.
- Exam code: JN0-362
 - Written exam
 - Administered by Pearson VUE
 - Exam length: 90 minutes
 - Exam type: 65 multiple-choice questions
 - Pass/fail status is available immediately
 - Junos Software Release: 19.4
- The JNCIS-SP certification is valid for three years.
Exams can be purchased and scheduled at
<https://home.pearsonvue.com/junipernetworks/>

Follow-on-Courses:

- Advanced Junos Enterprise Switching (AJEX)
 - Advanced Junos Enterprise Routing (AJER)
 - Junos Multicast Routing (JMR)
 - Junos Class of Service (JCOS)
 - Advanced Junos Service Provider Routing (AJSPR)
 - Junos Layer 3 VPNs (JL3V)
 - Junos Layer 2 VPNs (JL2V)
-

Content:

DAY 1

Routing Fundamentals

- Explain the role of a router in a network
- Define the difference between directly connected, static, and dynamic routes
- Explain how route preference selects the best route to a destination
- Explain the process of longest prefix match lookups
- Demonstrate how to view and verify the inet.0 and inet6.0 routing tables

Protocol Independent Routing

- Configure static routes
- Configure aggregate routes
- Configure generated routes
- Manage martian routes

Lab 1: Protocol Independent Routing

Fundamentals of OSPF

- Describe OSPF
- Explain adjacency formation and the designated router election
- Explain OSPF scalability

Routing Policy

- Explain how import and export policies can re-advertise prefixes between protocols
- Describe the CLI syntax of a routing policy
- Demonstrate how a routing policy can export static routes into OSPF

Deploying OSPF

- Configure and monitor OSPF
- Troubleshoot OSPF

IS-IS

- Explain IS-IS
- Describe IS-IS PDUs
- Define adjacency formation and DIS election
- Configure and monitor IS-IS
- Troubleshoot IS-IS

Lab 3: IS-IS

Fundamentals of BGP

- Explain BGP
- Describe BGP attributes

Deploying BGP

- Explain IBGP and EBGP
- Configure and monitor BGP
- Describe the BGP route reflection operation
- Examine the route reflection configuration

Lab 4: BGP

Advanced Routing Policy Features

- Describe advanced route-filter options
- Describe how to refer to a prefix list in a routing policy
- Explain route filters with mixed prefix lengths

Routing Instances

- Describe routing instances
- Configure and share routes between routing instances

Lab 5: Routing Instances

Load Balancing

- Describe the load-balancing concepts and operations
- Implement and monitor Layer 3 load balancing

Lab 6: Load Balancing

DAY 3

VRRP

- Describe, configure, and monitor VRRP

Graceful Restart and Bidirectional Forwarding Detection

- Describe high availability
- Explain graceful restart
- Explain Bidirectional Forwarding Detection

Lab 7: High Availability

GRES, NSR, and Unified ISSU

- Explain graceful Routing Engine switchover
- Explain nonstop active routing
- Explain unified ISSU

IP Tunneling

- Describe IP tunneling
- Describe GRE and IP-IP tunnels
- Deploy GRE and IP-IP tunnels

Lab 8: IP Tunneling

IPv6

- Explain IPv6 addressing
- Explain routing protocol configuration examples
- Describe tunneling IPv6 over IPv4

Filter-Based Forwarding

- Illustrate benefits of filter-based forwarding
- Configure and monitor filter-based forwarding

Lab 10: Filter-Based Forwarding

Additional Information:

Delegates will receive an official set of e-kit courseware approximately 1 week prior to the start of the course.

Further Information:
