## Basic z/OS Tuning Using the Workload Manager

**Duration: 5 Days**    **Course Code: ES54G**    **Delivery Method: Company Event**

---

### Overview:

Do you need to know how to establish a practical performance management program for your z/OS system? This course is designed for new performance analysts to learn to work with the Workload Manager (WLM) in goal mode. Learn concepts of WLM and performance management in the z/OS system using the WLM.

Learn how to analyze Resource Monitoring Facility (RMF) reports and implement service definitions via the WLM Interactive System Productivity Facility (ISPF) application. The course uses z/OS hands-on lab exercises to reinforce the concepts and techniques discussed in lecture.

### Company Events

These events can be delivered exclusively for your company at our locations or yours, specifically for your delegates and your needs. The Company Events can be tailored or standard course deliveries.

---

### Target Audience:

This is an intermediate course for z/OS system programmers, z/OS performance analysts, and z/OS performance administrators new to performance management for their z/OS system.

Note: Basic z/OS Tuning Using the Workload Manager (ES54GB) is intended for individuals new to WLM and the z/OS performance area.

---

### Objectives:

- Describe a performance and tuning methodology
  - Develop a systematic z/OS performance and tuning plan
  - Describe the factors which could affect the performance of an z/OS system
  - Use the WLM ISPF application
  - Describe the components of a service definition
  - Define workloads and service levels and classification rules
  - State which z/OS commands affect WLM operation
  - Identify the major WLM services for z/OS, including enclaves and application environments, and how they are used by DB2, WebSphere and CICS
  - Analyze CPU performance when running in a shared LPAR environment
  - Utilize and monitor zIIP and zAAP specialty engines
  - Measure and tune z/OS DASD, processor storage, and coupling facility configurations
  - Explain the functions and facilities of RMF and SMF
  - Analyze performance bottlenecks using RMF
  - Use Workload License Charges (WLC), defined capacity and soft capping to manage software costs
  - Describe advanced z/OS environments that utilize Intelligent Resource Director (IRD)
- 

### Prerequisites:

You should:

- Understand basic MVS / z/OS operation, such as job flow through JES, job scheduling paging, swapping, dispatching controls, I/O scheduling
  - Have a basic knowledge of the purpose of the Workload Manager's function in managing system workloads
  - Be familiar with using TSO and ISPF to manage data sets and run batch jobs
-

## Content:

### Day 1

- Welcome
- Unit 1 - Tuning methodology
- Unit 2 - Using SMF and RMF to monitor performance
- Lab 1 - Introduction to your system
- Lab 2 - Using RMF Monitor I and Monitor II

### Day 2

- Unit 3 - Performance impact when running in a shared LPAR environment
- Unit 4 - Basic system workload management (Part 1)
- Lab 3 - Implementing a WLM environment on z/OS (Part 1)

### Day 3

- Unit 4 - Basic system workload management (Part 2)
- Lab 3 - Implementing a WLM environment on z/OS (Part 2)

### Day 4

- Unit 5 - WLM commands, internals, and service
- Lab 4 - Using RMF Monitor III to solve performance problems

### Day 5

- Unit 6 - z/OS performance topic
- Unit 7 - Tuning processor storage
- Unit 8 - Miscellaneous performance topics

---
