

Hardware Configuration and Definition (HCD) for z/OS

Duration: 4 Days Course Code: ES96G

Overview:

This course is designed to teach you how to use the Hardware Configuration Definition (HCD) of z/OS to create an I/O configuration and dynamically alter the I/O configuration.

Target Audience:

This course is for people responsible for maintaining the I/O configuration contained in the input/output data files (IODFs) and input/output configuration data sets (IOCDs) at their z/OS installation.

Objectives:

- Describe new zSeries processor technology
- Code new zSeries processors (z990 to z10)
- Code ESCON channels and ESCON CTCs
- Code FICON channels and FICON CTCs
- Code Coupling Facilities (CF) and CF links
- Code cascaded FICON Director
- Create an IODF work file on a z processor from scratch
- Use CHPID mapping tool to create a validated work IODF
- Use work IODF and create a production IODF
- Perform Dynamic I/O changes on a real z/OS system
- Build a LOADxx parmlib member for initial program load (IPL)
- View configuration graphically
- Create appropriate configuration reports

Prerequisites:

You should have:

- basic knowledge of z/OS and I/O configuration. This knowledge can be developed on the job or by taking Fundamental System Skills in z/OS (ES10GB).
