

DevOps Engineering on AWS

Duration: 3 Days **Course Code: GK1979** **Delivery Method: Virtual Learning**

Overview:

DevOps Engineering on AWS demonstrates how to use the most common DevOps patterns to develop, deploy and maintain applications on AWS. The course covers the core principles of the DevOps methodology and examines a number of use cases applicable to startup, small-medium business, and enterprise development scenarios.

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

This course is intended for: System Administrators Software Developers

Objectives:

- This course is designed to teach you how to:
 - Use the principal concepts and practices behind the DevOps methodology
 - Design and implement an infrastructure on AWS that supports one or more DevOps development projects
 - Use AWS CloudFormation and AWS OpsWorks to deploy the infrastructure necessary to create development, test, and production environments for a software development project
 - Set up Git on AWS and understand the array of options for enabling a Continuous Integration environment on AWS
 - Use the core principles of Continuous Integration and Continuous Deployment
 - Implement several common Continuous Deployment use cases using AWS technologies, including blue/green deployment and A/B testing
 - Distinguish between the array of application deployment technologies available on AWS (including AWS CodeDeploy, AWS OpsWorks, AWS Elastic Beanstalk, and Amazon EC2 Container Service), and decide which technology best fits a given scenario
 - Fine tune the applications you deliver on AWS for high performance and use AWS tools and technologies to monitor your application and environment for potential issues
-

Prerequisites:

We recommend that attendees of this course have the following prerequisites:

- Attended [System Operations on AWS](#) course
 - Attended [Developing on AWS](#) course
 - Working knowledge of one or more high-level programming languages (C#, Java, PHP, Ruby, Python, etc.)
 - Intermediate knowledge of administering Linux or Windows systems at the command-line level
 - Working experience with AWS using both the AWS Management Console and the AWS Command Line Interface (AWS CLI)
-

Content:

Day 1

- What is DevOps?
- Infrastructure as Code, Part 1: Design and Security
- Infrastructure as Code, Part 2: CloudFormation and Configuration Management

Day 2

- Continuous Integration in the Cloud
- Continuous Delivery on AWS
- Deploying Applications on AWS, Part 1

Day 3

- Deploying Applications on AWS, Part 2
- Putting It All Together
- Performance-Tuning Your Deployments
- Administering and Automating Your Infrastructure
