

## CompTIA Advanced Security Practitioner (CASP+)

Duration: 5 Days Course Code: GK2951 Version: CAS-004 Delivery Method: Virtual Learning

### Overview:

CompTIA Advanced Security Practitioner (CASP+) is an advanced-level cybersecurity certification for security architects and senior security engineers charged with leading and improving an enterprise's cybersecurity readiness. CASP+ is an advanced-level cybersecurity certification covering technical skills in security architecture and senior security engineering in traditional, cloud, and hybrid environments, governance, risk, and compliance skills, assessing an enterprise's cybersecurity readiness, and leading technical teams to implement enterprise-wide cybersecurity solutions. Successful candidates will have the knowledge required to: Architect, engineer, integrate, and implement secure solutions across complex environments to support a resilient enterprise. Use monitoring, detection, incident response, and automation to proactively support ongoing security operations in an enterprise environment. Apply security practices to cloud, on-premises, endpoint, and mobile infrastructure, while considering cryptographic technologies and techniques. Consider the impact of governance, risk, and compliance requirements throughout the enterprise.

CASP+ is compliant with ISO 17024 standards and approved by the US DoD to meet directive 8140/8570.01-M requirements. Regulators and government rely on ANSI accreditation, because it provides confidence and trust in the outputs of an accredited program. Over 2.3 million CompTIA ISO/ANSI-accredited exams have been delivered since January 1, 2011.

### Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

### Target Audience:

Security Architect Senior Security Engineer SOC Manager Security Analyst

### Objectives:

#### ■ Security Architecture

■ Expanded coverage to analyze security requirements in hybrid networks to work toward an enterprise-wide, zero trust security architecture with advanced secure cloud and virtualization solutions.

#### ■ Governance, Risk, and Compliance

■ Expanded to support advanced techniques to prove an organization's overall cybersecurity resiliency metric and compliance to regulations, such as CMMC, PCI-DSS, SOX, HIPAA, GDPR, FISMA, NIST, and CCPA.

#### ■ Security Operations

■ Expanded emphasis on newer techniques addressing advanced threat management, vulnerability management, risk mitigation, incident response tactics, and digital forensics analysis.

#### ■ Security Engineering and Cryptography

■ Expanded to focus on advanced cybersecurity configurations for endpoint security controls, enterprise mobility, cloud/hybrid environments, and enterprise-wide PKI and cryptographic solutions

### Prerequisites:

Attendance in our Internetworking with TCP/IP and Switching in IP Networks courses is strongly recommended Security+ Prep Course

■ G013 - CompTIA Security+

### Testing and Certification

■
