
Beginning API Development with Node.js

Duration: 1 Day Course Code: LO035408 Delivery Method: Virtual Learning

Overview:

This course offers a deep but gentle dive into Node.js. First, by starting off with the basic building blocks of the modern JavaScript language, which are necessary for students to have a good grasp of Node.js, before delving into the fundamentals of Node.js.

Most courses quickly dive into Node.js forgetting that, at the end of the day, Node.js is still JavaScript. This can end up being a little uncomfortable for JavaScript newbies, since we can't build a solid house on a shaky foundation.

The course therefore begins with a quick introduction to the modern JavaScript language (ES6+). We will then look into Node's asynchronous programming model and examine Node's module system, including built-in modules and application modularization, as well as the NPM third-party module registry. We will skip a number of topics, which we will recommend for further reading, and will finish off by working on a simple web application API using the Hapi.js and Knex.js frameworks.

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

This course is targeted towards developers looking to build a career as a Node.js developer.

If you are interested in gaining a good grasp of Node.js in a systematic and hands-on way by working through a real-world project, then this course is for you.

Objectives:

- This is a 1-day course packaged with the perfect balance of theory and hands-on activities that will help you learn Node.js from scratch.
 - This course complies with instructional designing principles for all the 3 lessons. This will ensure that you repeat and reinforce your gained knowledge at every step. Each and every minute spent during this 1-day course will incrementally take you to a next level.
 - Here are the important topics that this course will cover:
 - Quickly get to grips with Node.js and its module system
 - Gain an understanding of asynchronous programming in Node.js
 - Develop scalable and high-performing APIs using Hapi.js and Knex.js
 - Write unit tests for your API to ensure reliability and maintainability
 - Complete a variety of hands-on exercises and activities to broaden your understanding of the concepts covered in this courseware
 - Dive into the Capstone project by building an API for a legacy application
-

Content:

Lesson 1: Introduction to Node.js

- The Basics of Node.js
- The Module System
- Asynchronous Programming with Node.js

Lesson 2: Building the API: Part 1

- Building a Basic HTTP Server
- Setting up Hapi.js
- Understanding Requests

Lesson 3: Building the API: Part 2

- Working with the DB Using Knex.js
 - Authenticating Your API with JWT
 - Testing Your API with Lab
-
