

Lean Six Sigma Black Belt

Duration: 10 Days **Course Code: LSSBLB** **Delivery Method: Virtual Learning**

Overview:

The Lean Six Sigma Black Belt training and certification program will equip participants with the technical competencies, team leadership skills and change management skills to lead Lean Six Sigma projects using the Lean Principles and DMAIC (Define Measure Analyze Improve Control) methodology. The 10-day program will cover the most contemporary process improvement practices adopted by leading organizations and proponents of Lean Sigma Transformation in manufacturing, service, healthcare, financial, public sector as well as many other industries.

Business success in any organisation requires vision, products and services that add value, processes that are efficient, people who are competent and a culture that supports the behaviours of improvement and development. This course will address all these aspects with a significant focus on the cultural change and the role of the Lean Sigma Black Belt in the facilitation, change management and application of the tools to change a culture.

The role of the Lean Six Sigma Black Belt is a business improvement professional that is able to support the Lean and Six Sigma implementation journey in organizations, including assisting systems and tools implementation. They possess the ability to mentor multiple teams, monitor performance of all activities and engage leadership support to deliver genuine business improvements.

This programme will run over 5 months and will focus heavily on the application of the tools rather than their academic understanding.

The course covers the phases of a typical Lean Transformation utilising Lean Principles and Six Sigma: Define, Measure, Analyze, Improve and Control.

The methodology follows a structured sequence of problem solving techniques and cultural change management to arrive at a solution. Statistics aid in the decision-making process and help to validate the success of changes. Cultural facilitation embeds that change.

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

This Lean Six Sigma Black Belt Training Course is recommended for all those in an organisation who will lead medium or large improvements and who will act as coaches or mentors to others involved in the improvement programme.

It is suitable for managers, internal consultants, change agents, project managers, team leaders, business improvement leaders or facilitators.

Prerequisites:

It is a pre-requisite that participants possess a Lean Six Sigma Green Belt or equivalent and have identified a significant improvement project that they will implement over the duration of the course.

Content:

	Basic terms	<ul style="list-style-type: none"> • Autonomous Maintenance / TPM
	Central limit theorem	<ul style="list-style-type: none"> • Quick Changeover / SMED
history, foundations, integration of Lean and Six Sigma, business processes and systems and LSS applications	Descriptive statistics	<ul style="list-style-type: none"> • Line Balancing/Operator Balance Charts
<ul style="list-style-type: none"> • Lean Transformation Roadmap 	Graphical methods	<ul style="list-style-type: none"> • Continuous Flow Layouts
<ul style="list-style-type: none"> • Lean Assessment 	Valid statistical conclusions	<ul style="list-style-type: none"> • Kanban/Pull Systems
<ul style="list-style-type: none"> • Leadership 	<ul style="list-style-type: none"> • Probability 	<ul style="list-style-type: none"> • Kaizen Events
Responsibilities, roadblocks, change management, projects, Six Sigma roles and responsibilities	Basic concepts and Distributions	<ul style="list-style-type: none"> • Pilot Testing
<ul style="list-style-type: none"> • Organizational Process Management and Measures 	<ul style="list-style-type: none"> • Process capability 	<ul style="list-style-type: none"> • Full-Scale Implementation
Impact on stakeholders, Critical to x (CTx) requirements, Benchmarking, Business performance measures, Financial measures	Process capability indices	<ul style="list-style-type: none"> • Creativity and Innovation
<ul style="list-style-type: none"> • Project Selection 	Process performance indices	<ul style="list-style-type: none"> • Eliminate, Combine, Redesign, Simplify (ECRS)
NPV (Net Present Value) Analysis	Short-term and long-term capability	<ul style="list-style-type: none"> • Design of experiments (DOE)
<ul style="list-style-type: none"> • Value Stream Mapping 	Process capability for non-normal data	<ul style="list-style-type: none"> • Waste elimination
<ul style="list-style-type: none"> • Management of change 	Process capability for attributes data	<ul style="list-style-type: none"> • Cycle-time reduction
Lean Six Sigma Teams	Process capability studies and Process performance vs. specification	<ul style="list-style-type: none"> • Kaizen and Kaizen Blitz
<ul style="list-style-type: none"> • Hoshin Kanri strategy deployment 	Analyse Phase	<ul style="list-style-type: none"> • Theory of constraints (TOC)
Define Phase	<ul style="list-style-type: none"> • Data Analysis Overview 	<ul style="list-style-type: none"> • TRIZ
<ul style="list-style-type: none"> • Voice of the customer 	<ul style="list-style-type: none"> • Pareto Analysis 	<ul style="list-style-type: none"> • Risk analysis and mitigation
<ul style="list-style-type: none"> • Project charter 	<ul style="list-style-type: none"> • Gap analysis 	Control Phase
Problem statement	<ul style="list-style-type: none"> • Root cause analysis 	<ul style="list-style-type: none"> • Control Plan Elements
	<ul style="list-style-type: none"> • Waste analysis 	<ul style="list-style-type: none"> • Statistical Process Control
	<ul style="list-style-type: none"> • Run Charts 	<ul style="list-style-type: none"> • Statistical process control

Project scope	• Histogram/Frequency Plot	Objectives,
Goals and objectives	• Cause and Effect Analysis	Selection of variables
Project performance measures	• Scatter Plot or Correlation Diagram	Rational sub-grouping
• Project tracking	• Multi-Variant Analysis	Control chart selection
• Project Stakeholder Analysis	Correlation coefficient	Control chart analysis
• Measurable Customer Requirements	Regression	• Other control tools
• Requirements Statements	Multivariate tools	Total productive maintenance
• Process Mapping	Multi-vari studies	Visual factory
• SIPOC	Attributes data analysis	• Maintain controls
Measure Phase	• Inferential Statistics Primer	Measurement system re-analysis
• Process characteristics	• Hypothesis testing	Control plan
Input and output variables	Terminology	• Sustain improvements
Process flow metrics	Statistical vs. practical	■ Lessons learned ■ Training plan deployment
Process analysis tools	Significance	Documentation
• Data collection	Sample size	Design for Six Sigma (DFSS) Frameworks and Methodologies
Types of data	• Design of Experiments Overview	• Common DFSS methodologies
Measurement scales	• Failure mode and effects analysis (FMEA)	• Customer Expectations
Sampling methods	Improve Phase	House of Quality
Collecting data	• Generating Creative Solutions- Brainstorming	Critical to Quality Deployment
• Measurement systems	• Analysing and Selecting Solutions- Decision Matrix	Critical Parameter Management
Measurement methods	• 5S	Design for X (DFX)
Measurement systems analysis		■ • Robust design and process (Special design tools)

- Basic statistics
