
IBM i - System i Work Management, Tailoring and Basic Tuning

Duration: 2 Days **Course Code: OL23G** **Delivery Method: Virtual Learning**

Overview:

This Classroom course explains how to balance the workload of the I-Series system to ensure optimum performance. Specifically this course explains how to manage workloads measure system performance and tune the operating system to meet processing requirements. This course is run using Version R520 of the software

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

Anyone who has responsibility for tuning and basic setup of OS/400. Before taking this course students should be able to do the following: Start and Stop the Operating System Start and Stop subsystems Manage job, message and output queues Describe security concepts and create user profiles.

Objectives:

- On completion, you will be able to :
 - Manage jobs by modifying subsystem descriptions, controlling batch jobs and tailoring job descriptions.
 - Create unique environments to run jobs.
 - Tune the performance of the system using pools/activity levels, execution parameters and system values.
-

Content:
