

SAP Building Transactional Apps with the ABAP RESTful Application Programming Model

Duration: 5 Days Course Code: S4D437 Delivery Method: Virtual and Classroom

Overview:

This course is a deep dive into the ABAP RESTful Application Programming Model. The primary focus lies on the transactional behavior of business objects and their consumption in OData UI services. You will learn to define business objects which consist of just one data node, as well as business objects consisting of a hierarchy of nodes. When implementing the transactional behavior, you will first use the generic data access layer (managed approach). Later you will also integrate existing legacy code (unmanaged or partially managed approach). You will draft-enable your business object and produce and consume business events. Finally, you will enable the extensibility of your business object and learn how to extend existing business objects. The course is held on SAP BTP, ABAP environment. However, most of the content is equally suitable for SAP S/4HANA cloud editions and SAP S/4HANA 2020 or later. Some features shown in the course may not be available in older SAP S/4HANA releases.

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

- Developer
- Development Consultant

Objectives:

■ This course will prepare you to:	■ Defining Compositions
■ Exploring the ABAP RESTful Application Programming Model	■ Implementing Unmanaged Data Access
■ Working with ABAP RESTful Application Programming Model business objects	■ Integrating Business Events
■ Adding Basic Operations Update and Create	■ Enabling and Using Extensibility
■ Developing Draft-enabled Services	

Prerequisites:

Essential

■ Experience in object-oriented ABAP Programming
■ Experience in modern, expression-based ABAP syntax
■ Basic knowledge of data modelling in ABAP dictionary and ABAP Core Data Services * The recommended way to acquire the necessary knowledge is through courses S4D400, S4D401, and S4D430 or the Acquiring Core ABAP Skills learning journey.

Content:

Exploring the ABAP RESTful Application Programming Model

- Exploring the Concept and Architecture
- Defining a CDS-based Data Model
- Defining an OData UI Service

Working with ABAP RESTful Application Programming Model Business Objects

- Defining RAP BOs and their Behavior
- Using the Entity Manipulation Language (EML) to Access RAP BOs
- Understanding Concurrency Control
- Defining Actions and Messages
- Implementing Authority Checks

Adding Basic Operations Update and Create

- Defining Static Field Control and Value Helps
- Implementing Input Checks using Validations
- Setting Values using Numbering and Determinations
- Implementing Dynamic Feature Control

Developing Draft-enabled Services

- Understanding the Draft Concept
- Implementing the Behavior of Draft-Enabled BOs

Defining Compositions

- Defining Composite RAP Business Objects
- Defining Compositions in OData UI Services
- Implementing the Behavior of Composite Business Objects

Implementing Unmanaged Data Access

- Exploring the Behavior Implementation Options
- Implementing Unmanaged Business Objects
- Implementing Data Access in Managed Business Objects

Integrating Business Events

- Raising and Handling Business Events
- Working with Event Parameters

Enabling and Using Extensibility

- Exploring Extensibility Options
- Enabling Data Model Extensibility
- Developing Data Model Extensions
- Enabling and Developing Behavior Extensions

Additional Information:

Course based on software release SAP BTP, ABAP Environment Most of the content is equally suitable for SAP S/4HANA cloud editions and SAP S/4HANA 2020 or later (some features shown in the course might not be available in older SAP S/4HANA releases)
