IBM Storage Scale - Remote Data Access

Duration: 3 Days   Course Code: H008G   Delivery Method: Virtual Learning

Overview:

Enterprises and organizations are creating, analyzing and keeping more data than ever before. An organization's underlying storage must support new-era big data and artificial intelligence workloads along with traditional applications while ensuring security, reliability and high performance. IBM Spectrum Scale meets these challenges as a high-performance solution for managing data at scale. This new course covers IBM Spectrum Scale features that enable data-anywhere access that spans storage and locations to accelerate applications across the data center or around the world. Attendees should already know the basics of installing, configuring and managing a Spectrum Scale clustered file system and how to use the installer toolkit.
This course is intended for IT professionals tasked with administering a Spectrum Scale storage cluster consisting of Linux nodes. The course includes information on various Spectrum Scale features that enable remote access to the data that is stored in a cluster file system. This includes: multi-cluster support, clustered NFS, cluster export services (CES) and protocol support (NFS, SMB, Object, and block), Active File Management (AFM), and AFM-based Asynchronous Disaster Recovery (AFM DR). The features are described in lecture materials and implemented in lab exercises.

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

This lecture and exercise-based course is for individuals who want to configure a Spectrum Scale cluster to allow remote data access.

Objectives:

- Configure a cluster to allow remote file system access

- Mount a Spectrum Scale file system from a remote cluster

- Implement Active File Management (AFM)

- Summarize AFM cache modes

- Describe AFM DR

- Differentiate AFM and AFM DR

- Implement AFM DR

- Describe and implement Clustered NFS (CNFS)

- Describe the Cluster Export Services (CES) architecture

- Implement CES protocols (NFS, SMB, Object, and block)

- Differentiate CNFS and CES NFS

Prerequisites:

Students must already know the basics of installing, configuring and managing a Spectrum Scale clustered file system. This prerequisite can be met by attending the following courses:

H005G - IBM Spectrum Scale Basic Administration for Linux and AIX

H006G - IBM Spectrum Scale Advanced Administration for Linux

Follow-on-Courses:

Go to the IBM Skills Gateway at www.ibm.com/training for further course selections.
