

IBM MQ V9.1 System Administration (using Windows for labs)

Duration: 5 Days Course Code: WM156G

Overview:

This course teaches you how to customize, operate, administer, and monitor IBM MQ on-premises on distributed operating systems. The course covers configuration, day-to-day administration, problem recovery, security management, and performance monitoring. In addition to the instructor-led lectures, the hands-on exercises provide practical experience with distributed queuing, working with MQ clients, and implementing clusters, publish/subscribe messaging. You also learn how to implement authorization, authentication, and encryption, and you learn how to monitor performance.

Note: This course does not cover any of the features of MQ for z/OS or MQ for IBM i.

Target Audience:

This course is designed for technical professionals who require the skills to administer IBM MQ.

Objectives:

- | | |
|---|---|
| ■ After completing this course, you should be able to: | ■ Define and administer a queue manager cluster |
| ■ Describe the IBM MQ deployment options | ■ Administer Java Message Service (JMS) in MQ |
| ■ Create and manage queue managers, queues, and channels | ■ Implement basic queue manager restart and recovery procedures |
| ■ Use the IBM MQ sample programs and utilities to test the IBM MQ network | ■ Use IBM MQ troubleshooting tools to identify the cause of a problem in the IBM MQ network |
| ■ Configure distributed queuing | ■ Manage IBM MQ security |
| ■ Configure MQ client connections to a queue manager | ■ Monitor the activities and performance of an IBM MQ system |

Prerequisites:

- Basic knowledge of IBM MQ concepts and features
- Some knowledge of TCP/IP configuration
- Basic experience with Windows 2016 system administration

Content:

Introducing IBM MQ	Exercise: Implementing a basic cluster	Diagnosing problems
Exercise: Getting started with IBM MQ	Publish/subscribe messaging	Exercise: Running an IBM MQ trace
Working with IBM MQ administration tools	Exercise: Configuring publish/subscribe message queuing	Backing up and restoring IBM MQ messages and object definitions
Exercise: Working with IBM MQ administration tools	Implementing basic security in IBM MQ	Exercise: Using a media image to restore a queue
Configuring distributed queuing	Exercise: Controlling access to IBM MQ	Exercise: Backing up and restoring IBM MQ object definitions
Exercise: Implementing distributed queuing	Securing IBM MQ channels with TLS	High availability
Managing clients and client connections	Exercise: Securing channels with TLS	Monitoring and configuring IBM MQ for performance
Exercise: Connecting an IBM MQ client	Authenticating channels and connections	Exercise: Monitoring IBM MQ for performance
Advanced IBM MQ client features	Exercise: Implementing connection authentication	Exercise: Monitoring resources with the IBM MQ Console
Working with queue manager clusters	Supporting JMS with IBM MQ
