Veeam Backup & Replication: Architecture and Design

Duration: 3 Days   **Course Code: VMCA**   **Version: 12.1**   **Delivery Method: Virtual Learning**

Overview:

The three-day, Veeam® Backup Replication™ v12.1: Architecture and Design training course is focused on teaching IT professionals how to effectively architect a Veeam solution through attaining technical excellence following the Veeam Architecture Methodology used by Veeam's own Solution Architects.

Over the course of three days, attendees will explore the goals of requirement gathering and infrastructure assessment and use that information to design Veeam solutions within team exercises. Attendees will also analyze considerations when turning conceptual designs into logical designs, make those designs physical and then describe obligations to the implementation team that will implement design. Other topics covered will include security, governance and validation impacts when architecting a Veeam solution and how to build these into the overall design.

Attendees should expect to contribute to team exercises, present designs and defend decision making.

Completion of this course satisfies the prerequisite for taking the Veeam Certified Architect (VMCA)exam, the highest level of Veeam certification. VMCA certification proves knowledge of architecture and design concepts, highlighting the level of skill required to efficiently architect a Veeam solution in a range of real-world environments.

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

Senior Engineers and Architects responsible for creating architectures for Veeam environments.

Objectives:

- **After completing this course attendees should be able to:**

- Design and architect a Veeam solution in a real-world environment

- Describe best practices, review existing infrastructures, and assess business/project requirements

- Identify relevant infrastructure metrics and perform component (storage, CPU, memory) quantity sizing

- Provide implementation and testing guidelines in line with designs

- Innovatively address design challenges and pain points, matching appropriate Veeam Backup & Replication features with requirements

Prerequisites:

Attendees should be able to:

- Explain core concepts from the Veeam Backup & Replication v12.1: Configure, Manage and Recover course.
- Configure common Veeam components.
- Operate Veeam Backup & Replication Console.
- Optimize an existing backup environment after studying its current implementation.
- Describe repository types and usage priorities (i.e., fast cloning, dedupe, object storage, data flow recommendations).
- Awareness of backup targets for Veeam Backup for cloud products and Veeam Plug-ins for enterprise applications.
- Have extensive technical experience with Veeam.
Ideally VMCE certified, attendees should have extensive

Testing and Certification

Completion of this course satisfies the prerequisite for taking the Veeam Certified Architect (VMCA) exam, the highest level of Veeam certification. VMCA certification proves knowledge of architecture and design concepts, highlighting the level of skill required to efficiently architect a Veeam solution in a range of real-world environments.

commercial experience with Veeam and a broad sphere of
technical knowledge of servers, storage, networks, virtualization
and cloud environments.

- VMCE - Veeam Backup & Replication: Configure, Manage and
  Recover (VBRCMR)

Content:

Introduction

- Review course expectations
- Analyze architecture principles
- Review Veeam architecture methodology
- Define the scope of a design project
- List the deliverables of a design project

Discovery

- Describe the data gathering process
- List key data to get from stakeholders
- Describe possible tools to analyze existing
  environments
- Identify complexity in the environment
- Review the course scenario

Conceptual Design

- Clarify requirement, constraint, assumption,
  and risk concepts
- Identify received information as requirement,
  constraint, assumption, or risk
- Create high-level infrastructure and data
  flow diagrams

Logical Design

- List required Veeam components based
  on requirements
- Describe logical grouping parameters
- Utilize appropriate sizing tools
- Create logical designs based on the
  course scenario

Physical Design

- Describe the decision making procedure
- List the considerations behind designing
  backup repositories and VMware backup
  proxies
- Explain the implications of using backup
  from storage snapshots
- Document physical design decisions
- Create physical designs based on the
  course scenario

Group Presentation

- Produce a presentation to a customer
  that summarizes your design
- Present your design

Implementation and Governance

- Describe the implementation guide
- List possible backup server configurations
  and security configurations
- Define the job design
- List the architect obligations for
  implementation

Validation and Iteration

- List the possible validation tests that can
  be performed on an implementation
- Describe validation tools and procedures
- List recovery validations that can be
  performed on an implementation
- Define malware detection methods
- Analyze considerations behind starting a
  new design cycle
