# AI Leadership Workshop

**Duration: 1 Day** **Course Code: AILDW** **Delivery Method: Company Event**

## Overview:

### The problem it solves

Most leadership teams are being asked to say yes or no to AI before they share a common view of what it can do, what it costs to run and who is accountable when it goes wrong. That's when pilots run ahead of governance, compliance stops projects late, and budgets get spent without a clear outcome.

**What you get**

Your team doesn't sit through a presentation. It works on its own situation, with a GK facilitator guiding the discussion and a co-facilitator working with each table. By the end of the session, your team has:

- A shared understanding of what today's AI can and can't do, in plain business terms
- An agreed view of where you stand, placed on a four-phase AI maturity scale
- Your top blockers named, with an owner for each: data, compliance, skills, governance or ROI
- One agreed first pilot: small, measurable and easy to stop if it doesn't work
- A written readout from GK within five business days: your maturity position, decisions, pilot and next steps

## Target Audience:

A leadership team that needs to approve, fund and defend AI decisions together:

- Agency, department or company heads and their direct reports
- VPs, SVPs and executive directors
- Finance, legal, policy, HR and program owners who sign off on AI spend or risk
- Public sector and commercial teams alike

No technical background is needed. The workshop works best when the people who make the final call are in the room together

## Objectives:

- **What's real right now**
- Briefing on current AI capability, cost trends and the rules taking shape, illustrated with public sector and commercial examples
- **Where we stand**
- Team places itself on the four-phase maturity scale and compares views across functions
- **What's in the way**
- Working at tables on the five common blockers; agree the top two and who owns them
- **Where we start**
- Score candidates use cases on value, risk and how easy they are to measure; agree one first pilot
- **Our 30-day plan**
- Commit to three actions, owners and dates; agree what goes in the readout

## Content:

What's included

- A 30-minute planning call with your sponsor beforehand, so examples and use cases fit your organization
- A short pre-session questionnaire for participants
- A lead facilitator and a co-facilitator
- All workshop materials and the maturity self-assessment
- A written readout within five business days
- A follow-up call to recommend next steps, including team training paths

## Additional Information:

- Built on GK's public course *Implementing an AI Maturity Plan* (GK840041). Leaders who want to go further can take the full day.
- Pairs with the Planning an AI Pilot Workshop for your technology leads, who can turn the agreed pilot into a plan the team can build.
