Mirantis Container Cloud (MCC) and Mirantis OpenStack (MOS) for Kubernetes

Duration: 2 Days **Course Code: CN214** **Delivery Method: Company Event**

Overview:

In this rapid introduction to Mirantis Container Cloud, students will learn how to deploy Kubernetes clusters to in a virtual bare metal environment using MCC, as well as how to manage user permissions,
Stacklight-based monitoring and logging tools, and third-party monitoring integrations.
This course is designed to help your operators get up to speed quickly on the architecture and configuration best practices of Mirantis OpenStack for Kubernetes. We will focus on understanding the underlying Kubernetes elements that deploy OpenStack services on your infrastructure.
We will also explore some of the tunable parameters to customize your OpenStack deployment, and demonstrate how these changes are deployed on a live environment. You will get hands-on experience performing a backup of the OpenStack database using tools built into MOS.

Updated November 2026

Company Events

These events can be delivered exclusively for your company at our locations or yours, specifically for your delegates and your needs. The Company Events can be tailored or standard course deliveries.

Target Audience:

This course is targeted at students with the following: Motivations: Deploy and configure the underlying Kubernetes Cluster for MOS. Operate a containerized OpenStack cloud. Roles: This course is intended for System Operators, Administrators, engineers who have the basic knowledge of Linux, virtualization and containerization technologies, Kubernetes API and CLI, Helm and Helm charts, Mirantis Kubernetes Engine, and OpenStack.

Objectives:

- After this course participants should be able to:
- Deploy and configure Kubernetes clusters using Mirantis Container Cloud (MCC).
- Manage users, permissions, multitenancy, and LDAP integration within MCC.
- Configure and use Stacklight, Prometheus, Grafana, and Kibana for logging and monitoring.
- Access OpenStack APIs, explain MOS infrastructure components, and manage OpenStack operations.
- Configure OpenStack parameters, perform version updates, and back up the OpenStack database.

Prerequisites:

- OS100 or similar experience with OpenStack Essentials
- CN100 Docker Containerization Essentials and CN120 Kubernetes Applications Essentials course and prerequisites therein, or equivalent experience
- Familiarity with the Bash shell
- Filesystem navigation and manipulation
- Command line text editors like vim or nano
- Common tooling like curl, wget and ping
- Familiarity with YAML and JSON notation

Lab Requirements

- Familiarity with Linux command line and kubectl.
- Laptop with WiFi connectivity

Attendees should have the latest Chrome or Firefox installed, and a free account at strigo.io

Testing and Certification

- None

Follow-on-Courses:

- CN212, CN213, OS220

Content:

- MCC User Management
- Using Keycloak to manage user permissions
- Integrating LDAP with MCC
- Managing permissions for multitenancy
- Cluster Logging ; Monitoring
- Stacklight configuration and cluster integration
- Using Prometheus and Grafana dashboards
- Customizing Stacklight configurations ; third-party integrations
- Exploring logs with Kibana
- Explain each component of the MOS infrastructure stack.
- Use multiple methods to access openstack APIs running on MOS
- Configure supported OpenStack parameters and update the OpenStack version on a live environment.
- Run common OpenStack operations tasks (taking a backup of the Openstack database)

- MCC User Management
- Using Keycloak to manage user permissions
- Integrating LDAP with MCC
- Managing permissions for multitenancy
- Cluster Logging ; Monitoring
- Stacklight configuration and cluster integration
- Using Prometheus and Grafana dashboards
