

Docker Fundamentals

Duration: 2 Days **Course Code: DOCK6016**

Overview:

The Docker Fundamentals training course features the foundational concepts and practices of containerization on a single Docker node. The course offers learners the opportunity to assimilate basic container orchestration and how to scale Docker across multiple nodes in a simple swarm or Kubernetes cluster.

This course provides essential foundational knowledge for subsequent Docker courses.

Target Audience:

Developers, operators, and architects desiring a strong foundation in Docker technologies and an introductory hands-on experience building, shipping, and running Docker containers.

Objectives:

- Understand the foundations of containerization on a single Docker node
- Create an image using Dockerfile best practices
- Use volumes in the application development process
- Apply concepts of the Docker networking model
- Understand the goal of services as a method of scaling
- containers
- Utilize two different orchestrators (Swarm and Kubernetes) to deploy a single application across multiple machines
- Create a secret and understand its accessibility capabilities

Prerequisites:

Familiarity with Linux command line.

Content:

Day 1

- The Docker Story
- Introduction to Images
- Creating Images
- System Commands

Day 2

- Docker Networking Basics
- Docker Compose
- Scaling out with Swarm ; Kubernetes
- Managing Secrets
