

VMware NSX-T Data Center: Design

Duration: 5 Days **Course Code: VMNSX-TDCD** **Version: 3.2** **Delivery Method: Virtual Learning**

Overview:

This five-day VMware NSX-T Data Center course provides comprehensive training on considerations and practices to design a VMware NSX-T™ Data Center environment as part of a software-defined data center strategy. This course prepares the student with the skills to lead the design of NSX-T Data Center offered in release 3.2, including design principles, processes, and frameworks. The student gains a deeper understanding of the NSX-T Data Center architecture and how it can be used to create solutions to address the customer's business needs.

Product Alignment: VMware NSX-T Data Center 3.2

Virtual Learning

This interactive training can be taken from any location, your office or home and is delivered by a trainer. This training does not have any delegates in the class with the instructor, since all delegates are virtually connected. Virtual delegates do not travel to this course, Global Knowledge will send you all the information needed before the start of the course and you can test the logins.

Target Audience:

Network and security architects and consultants who design the enterprise and data center networks and VMware NSX® environments
