

Network Automation with Red Hat Ansible Automation Platform

Duración: 4 Días **Código del Curso: DO457** **Método de Impartición: Curso Cerrado (In-Company)**

Temario:

Configure and manage network infrastructure using Red Hat Ansible Automation Platform.

Network Automation with Red Hat Ansible Automation Platform (DO457) is designed for network administrators or infrastructure automation engineers who want to use network automation to centrally manage the switches, routers, and other devices in the organization's network infrastructure. Learn how to use Red Hat Ansible Automation Platform to remotely automate the configuration of network devices, test and validate the current network state, and perform compliance checks to detect and correct configuration drift.

This course is based on Red Hat® Ansible Automation Platform 2.3

Note: Starting January 1, 2026, Red Hat introduces RHLS-Course — a flexible subscription model now included with this catalog offering. This replaces the previous direct virtual class enrollment from Global Knowledge.

When you purchase this item, you'll receive an RHLS subscription at the course level, giving you the freedom to choose the schedule that works best and self-enroll in your selected class.

Your RHLS subscription includes:

- One live, instructor-led virtual session
- 12 months of self-paced learning access
- One certification exam with a free retake

Onsite Classroom-based sessions and closed course options remain unchanged.

Updated Jan2026

Curso Cerrado (In-Company)

Debido a que nuestra formación es modular, nuestros responsables de formación e instructores pueden trabajar con usted y su equipo para detectar las necesidades formativas y adaptar un temario de forma rápida y rentable. Durante una formación cerrada, usted recibirá una formación de expertos en un curriculum adaptado a sus necesidades.

Dirigido a:

This course is designed for network administrators, network automation engineers, and infrastructure automation engineers who are responsible for deploying, managing, and automating the network infrastructure of their organization or enterprise.

Objetivos:

- After this course participants should be able to:
- Prepare a development environment for Ansible network automation
- Write and troubleshoot effective Ansible Playbooks for network automation
- Gather information about network infrastructure configuration for infrastructure awareness and configuration backup
- Automate specific network administration use cases, including configuration of routers and switches, ports, VLANs, SNMP monitoring, and routing protocols
- Use Ansible Playbooks to manage devices from various hardware vendors, including Cisco, Juniper, and Arista
- Centrally manage Ansible content in Git and run it centrally with automation controller
- Reuse existing, tested network automation code with Ansible Roles, Ansible Content Collections, and Ansible validated content

Prerequisitos:

- Experience with network administration, including a solid understanding of TCP/IP, routers, and managed switches
- Familiarity with managing network devices from the command line, preferably with one or more of Cisco IOS, IOS XR, or NX-OS; Juniper Junos; or Arista EOS
- Knowledge equivalent to Red Hat System Administration I (RH124) or better is recommended

Exámenes y certificación

- Red Hat Certified Specialist in Ansible Network Automation exam (EX457)

■ Prior Ansible knowledge is not required
Take Red Hat free assessment to gauge whether this offering is the best fit for your skills [Red Hat Skills Assessment](#)

Siguientes cursos recomendados:

■ Developing Advanced Automation with Red Hat Ansible Automation Platform (DO374 - AU374)

Contenido:

| | | |
|---|--|---|
| Introducing Red Hat Ansible Automation Platform | Managing Variables and Facts | Automating Network Automation Tasks |
| Describe the fundamental concepts of Ansible and how it is used, and install development tools from Red Hat Ansible Automation Platform | Write playbooks that use variables to simplify management of the playbook and facts to reference information about managed nodes | Automate common network administration tasks, discussing recommended practices and approaches to cross-vendor automation |
| Implementing an Ansible Playbook | Implementing Task Control | Comprehensive Review |
| Create an inventory of managed nodes, write a simple Ansible Playbook, and run the playbook to automate tasks on those nodes | Manage task control and task errors in Ansible Playbooks | Demonstrate skills learned in this course by installing, optimizing, and configuring Ansible for the management of network devices and infrastructure |
| Managing and Running Playbooks | Simplifying Playbooks with Roles and Ansible Content Collections | |
| Manage automation code in version control and run Ansible Playbooks from a centrally managed automation controller | Use Ansible Roles and Ansible Content Collections to develop playbooks more quickly and to reuse Ansible code | |
