Cursusduur: 3 Dagen Cursuscode: GKKUBCKAD

Beschrijving:

This Kubernetes CKAD Professional course is a training for Developers and a Certified Kubernetes Application Developer (CKAD) exam theory training. The training covers the Kubernetes Fundamentals for Developers as defined by the Cloud Native Computing Foundation (CNCF) and tested in the CKAD exam: from the background of the Kubernetes Architecture in the context of IT development, Microservices, and Cloud-Native so that you can start using Kubernetes from a point of view, understanding, and insight at the end of the training

The training is hands-on: every participant has their own bare-metal cluster the training is loaded with exercises and examples (which you carry out yourself), so Kubernetes will be taught by doing, at the level of CKAD.

The experiences you gain during the training will give you tools to use Kubernetes in practice and prepare them, based on the theory, for the CKAD exam.

Does your organization start embracing Kubernetes? And do you want to make the next step in the world of Kubernetes and become a specialist? Then this training is perfect for you.

Doelgroep:

The training is meant for: Developers or DevOps Engineers who are responsible for developing, building, or rolling out applications that need to run on Kubernetes hosting. The entry-level level is from beginning to medium knowledge of Kubernetes. For anyone who aims to obtain certification as a Certified Kubernetes Application Developer (CKAD). This training teaches the theory needed for the CKA Exam..

Doelstelling:

- The starting points of this training are:
- Hands-on learning of Kubernetes in the basics and on bare metal. In accordance with the theory as expected by the Cloud Native Foundation for certification.
- After this training, the participant will be able to make a start with Kubernetes in his/her organization.
- After this training, the participant has the basic knowledge to set up and use Kubernetes on both on-premise and managed hosting.
- Learning the Kubernetes basis, as formulated by the CNCF, from a hands-on approach and based on the Kubernetes architecture (to provide understanding and context).
- This training lays the foundation needed for certification and deepening so that follow-up training can build on this.
- On the basis of this training the participant gets insight into Kubernetes and an overview of the level of application, microservice, and 'modern application architecture'.
- Based on working and elaborated expert examples the participant can start with Kubernetes expert parts in their own organization after the training or build a solution based on obtained examples.

Vereiste kennis en vaardigheden:

- Minimum dexterity/basic knowledge of Linux command-line (Bash, Linux commands), Private Keys and Public Keys are required to follow the pace of this training.

Examens en certificering

In this training, the basic knowledge required for the CKAD exam will be taught. The exam itself consists of assignments, which makes the exam a test for skills and speed of action.

When passing the exam is the starting point, a theoretical/comprehensive basis alone is not enough to successfully complete the CKAD exam. For this purpose the Kubernetes CKAD Exam Prep (GKKUBCKAD-E) is recommended.

Vervolgcurssussen:

The following courses are recommended for further study:

- Kubernetes CKAD Exam Prep (GKKUBCKAD-E)
 - Kubernetes Developer Advanced (GKKUBCKADA)
 - GKKUBCKAD-E - Kubernetes CKAD Exam Prep
